this volume is the newest release in the authoritative series issued by the
national academy of sciences on dietary reference intakes dris this series
provides recommended intakes such as recommended dietary allowances rdas
for use in planning nutritionally adequate diets for individuals based on age and
gender in addition a new reference intake the tolerable upper intake level ul has
also been established to assist an individual in knowing how much is too much of
a nutrient based on the institute of medicine s review of the scientific literature
regarding dietary micronutrients recommendations have been formulated
regarding vitamins a and k iron iodine chromium copper manganese
molybdenum zinc and other potentially beneficial trace elements such as boron
to determine the roles if any they play in health the book also reviews selected
components of food that may influence the bioavailability of these compounds
develops estimates of dietary intake of these compounds that are compatible
with good nutrition throughout the life span and that may decrease risk of
chronic disease where data indicate they play a role determines tolerable upper
intake levels for each nutrient reviewed where adequate scientific data are
available in specific population subgroups identifies research needed to improve
knowledge of the role of these micronutrients in human health this book will be
important to professionals in nutrition research and education
