<u>A Selection of Hymns, Chiefly Watts's, for Use in Public Christian Worship</u> 1853 the objective of this study was to evaluate the suitability of existing instrumentation and techniques and to stimulate development of modified or new procedures to measure the amount and state of water in highway components such as embankments subgrades base courses pavements and structures in accomplishing this objective the researchers conducted an extensive literature review those techniques that appear to be immediately applicable to highway problems were evaluated using a linear decision model for comparing instrument performance characteristics with specific moisture measurement needs a comprehensive list of performance characteristics with which to make this comparison was compiled
