this thesis argues that the current incident command system ics is inadequate for activating the national guard military support detachment rapid assessment initial detection raid teams which are vital for responding to domestic terrorism the current ics does not allow first responders to contact national guard units directly

during a wmd incident first responders must send a request via their emergency operation center eoc through the state emergency management division emd to the state governor s office for approval the governor can then activate the national guard to respond to the incident this process is unnecessarily time consuming serious jurisdictional issues and turf wars may emerge between first responders and raid teams at precisely the time when close coordination is most necessary raid teams should be recognized as operational units and given the ability to initiate their response plan upon receipt of an alert from the local eoc with the approval of the raid team s higher headquarters they may then deploy appendix a provides a guide to suggested changes in existing regulations this thesis also proposes changes in education and training that should help alleviate other problems associated with rapid response including the risk of jurisdictional conflicts and good samaritan casualties
