this book started out as a manual the idea was to offer straightforward instruction on how to handle patients in whom renal function is altered by intrinsic as well as systemic or extrarenal disease while we have attempted to provide simple approaches to most conditions we have gone beyond that and offer here more detailed description of pathophysiology diagnosis and therapy thus the manual has become a handbook in so doing we hope we have widened the audience for which the book may be useful as it now stands we envision that students house staff nephrology trainees nephrologists primary care physicians and nurses of specialized units interested in kidney related disturbances and in alterations of the composition of the extracellular fluid will benefit from reading the handbook while providing a rational background for the treatments outlined each author has attempted to narrate the reasons why such therapy is utilized frequently the information is provided in tables and figures to which ready reference can be made the flow chart approach has also been utilized to illustrate pathophysiological sequence or steps in therapy in most instances the discussion of pathophysiology has been limited to what is widely accepted rather than treading into anything controversial unless the nature of the problem or the nature of our knowledge is ambiguous
