an electronic communications system using electronic signals a communications system or communication system is a collection of individual telecommunications networks systems relay stations tributary stations and terminal equipment usually capable of interconnection and interoperation to form an integrated whole telecommunication science and practice of transmitting information by electromagnetic means modern telecommunication centers on the problems involved in transmitting large volumes of information over long distances without damaging loss due to noise and interference explain the functions of the three main parts of an electronic communication system describe the system used to classify different types of electronic communication and list examples of each type discuss the role of modulation and multiplexing in facilitating signal transmission telecommunications media equipment and systems metal wire terrestrial and satellite radio and optical fibre employed in the transmission of electromagnetic signals facilitating mass communication and mass media transmission media and the problem of signal degradation electronic communication such as e mail text messages faxes and even social networking are examples of communication technology technology has increased the limits of communications between employees in any business ceos of large companies can speak with one another via the internet from around the world communications signals can be sent by analogue signals or digital signals via analogue communication systems or digital communication systems
