this book analyses noah webster's and samuel johnson's use of verbal examples in their dictionaries as a means of giving guidance on word usage the author's major interest lies in elucidating how uniquely webster who was originally a grammarian made use of verbal examples in order to achieve this purpose the author provides chapters based on types of entry words in their functional contexts johnson's selection of sources of citations and the frequency of his quoting citations tended to vary strongly according to the type of entry word he also supplied invented examples rather than citations when he thought it especially necessary to clarify the use of a word by contrast with the exception of biblical ones almost all of webster's citations were taken from johnson's dictionary however webster significantly made full use of such citations to express his view on word usage which differs essentially from johnson's besides webster had a strong tendency to quote phrases and sentences from the bible for the same purpose

over the last forty years there has been a growing interest to extend probability theory and statistics and to allow for more flexible modelling of imprecision uncertainty vagueness and ignorance the fact that in many real life situations data uncertainty is not only present in the form of randomness stochastic uncertainty but also in the form of imprecision fuzziness is but one point underlining the need for a widening of statistical tools most

such extensions originate in a softening of classical methods allowing in particular to work with imprecise or vague data considering imprecise or generalized probabilities and fuzzy events etc about ten years ago the idea of establishing a recurrent forum for discussing new trends in the before mentioned context was born and resulted in the first international conference on soft methods in probability and statistics smps that was held in warsaw in 2002 in the following years the conference took place in oviedo 2004 in bristol 2006 and in toulouse 2008 in the current edition the conference returns to oviedo this edited volume is a collection of papers presented at the smps 2010 conference held in mieres and oviedo it gives a comprehensive overview of current research into the fusion of soft methods with probability and statistics
