lynx minister models whether you are new to analogue photography or you have shot vintage cameras in the past this book will help you make a success of buying and using the yashica 35 range of cameras besides richard s experience with the cameras you will find reprints of original guides and manuals that will help you buy use maintain and repair your camera the yashica rangefinder cameras are all equipped with high quality lenses and great features from the all manual 35w to the aperture priority electro 35 they provide a quality alternative to slr and point shoot cameras producing the rich colours and atmosphere that many will say only film can deliver these cameras capture the most enjoyable aspects of film photography and the experience will help you become a better photographer and create some super results to accompany the book the author has created a dedicated web resource page that will help you find even more information such as battery conversion sources film suppliers user generated galleries and much more we regularly update the web resource guide with information and resources to make it a valuable addition to the detailed information found in this vintage guide buy the yashica 35 camera book today and start your journey to learn more about how to buy use and enjoy these wonderful film cameras

## A Year with My Camera 2016

excerpt from beginner s guide to photography showing how to buy a camera and how to use it it is quite impossible to write down anything definite with regard to the length of time for which the lens must be uncovered if we had only one particular subject to photograph and this subject were always lighted by the same amount of daylight it would be an easy matter to calculate the amount of exposure required with every diaphragm of a lens provided that the necessary amount had been ascertained by experiment with but one of those diaphragms for these stops or diaphragms as furnished with modern lenses have apertures bearing a definite relation to one another as a general rule each diaphragm will require double the exposure needed for the next size larger or to put it in another way suppose the smallest stop of a lens to require an exposure of 24 seconds with a given subject with the next size larger the exposure will be 12 then 6 then 3 then until we come to the full aperture of the lens by which the picture can be taken in ofa second but as a matter of fact the exposure varies not only with the nature of the subject but with the time of day the time of year and the state of the atmosphere the old adage experientia can not be more applied
