She no longer believes that love conquers all. He questions his convictions alone. Each faces an uncertain future. However, fate has other ideas. Just as fate placed their lives on a collision course five years ago, Andrew and Caryn Chadwick's paths cross once again in Toronto after a four-month separation. Despite Andrew's assurances that he wants to repair their marriage, Caryn is wary, not certain she can trust him and struggles with doubts and questions about his relationship with a member of his rehab team wracked with guilt. Andrew questions his determination to return to the Tampa Sun's hockey team and he seeks to convince Caryn their marriage will survive. Fate intervenes with a gift at the worst possible moment. Caryn can hide this secret for only a short time, but is Andrew capable of pushing his needs aside when he discovers the truth? Can she risk her heart and soul once again? This piece of our being follows Andrew's and Caryn's journeys through a fragile reconciliation. Both vow to place honesty at the center of their future, but will the secrets revealed heal their marriage or drive them further apart? The conclusion to the Clearing the Ice Trilogy, this piece of our being delivers Andrew and Caryn's happily ever after, but the path to reconciliation is rocky and missteps prove costly.

A stunning new epic fantasy series following a young outcast who must fight with everything she has to survive. Set in the same world as *Red Sister* in the Ice East of the Black Rock, there is a hole into which broken children are thrown. Yaz's people call it the Pit of the Missing, and now it is drawing her in. As she has always known, it would resist the cold. To endure the months of night when even the air itself begins to freeze requires a special breed. Variation is dangerous, difference is fatal, and Yaz is not the same. Yaz's difference tears her from the only life she's ever known away from her family, from the boy she thought she would spend her days with, and has to carve out a new path for herself in a world whose existence she never suspected. A world full of difference and mystery and danger. Yaz learns that Abeth is older and stranger than she had ever imagined. She learns that her weaknesses are another kind of strength and that the cruel arithmetic of survival that has always governed her people can be challenged.

Queen of the fae courts faced with an impossible battle destined to never be with the Unseelie. I love the magical. Tea has worn off my eyes, are wide open, and it's with horror that I realize the fate of two realms rests on my shoulders. After my mother's ultimate sacrifice to trap Rubezahl in Underhill, terrified humans clamoring for answers, whispered rumors from both Seelie and Unseelie, and a stepmother who seeks the throne for surprising reasons are the least of my troubles. Rubezahl has returned far sooner than I thought possible. I'm not ready. I can't win this, and not only that, he has something crucial. If we are to win, he's taken something I cannot live without. The place of the final battle has been decided, and two armies will meet. Yet forces beyond my understanding must be satisfied first. Old magics rise and demand their dues. There is no option but to race and decipher the puzzle to save the man I love, the friends more important to me than my own life, and humans and fae alike. Two realms, only I can save them. We're screwed. If you can't get enough of Sarah J. Mass, Holly Black, or Jennifer L. Armentrout, you will love this vibrant world where impossible love and an explosive pace will leave you breathless.

this book updates the first edition for the status of knowledge in the physics of lake ice and the interactions between the ice cover and the liquid water underneath since the first edition was written in 2013 there has been a lot of progress in the field in particular concerning environmental questions and the impact of climate change life conditions in ice covered lakes and practical matters are now brought more into the picture so that the revision also properly serves as a handbook for applications the author has worked widely with boreal lakes polar lakes and central asian lakes that provides a wide geographical spectrum chapter 1 gives a brief overview and presents the research fields the second chapter contains the classification of ice covered lakes and observation techniques especially remote sensing in chapter 3 the structure and properties of lake ice are presented including optics and geochemistry ice growth and melting are treated in chapter 4 while the following chapter focuses on ice mechanics with applications to traffic on ice and ice loads chapter 6 goes into the exotic environment of pro glacial lakes chapter 7 contains the stratification and circulation of the water body beneath lake ice chapter 8 presents the winter ecology of freezing lakes and discusses the lake ice interface toward the society and chapter 9 summarizes the climate change impact on lake ice seasons the book ends into a brief closing chapter and list of references research problems for student learning are listed throughout the book annexes are included to provide numerical

data of constants and standard formulae to help practical calculations and student tasks lake ice closely interacts with human living conditions but people have learnt to live with that and to utilize the ice in the present time this is true for on ice traffic and recreation activities ice fishing has become a widely enjoyed hobby and winter sports such as skiing skating and ice sailing are popular activities on frozen lakes the lake ice response to eventual climate warming would appear as a shortening of the ice season due to the increasing air temperature and also as changing of the quality of the ice seasons via changes in ice thickness and structure the book gives the whole story of lake ice into a single volume the second revised edition updates the content based on recent progress in winter limnology and ice physics research and applications the author has contributed to lake ice research since the 1980s in particular his topics have been lake ice structure and thermodynamics light transfer in ice and snow ice mechanics in large lakes and lake ice climatology mathematical modeling of ice growth drift and decay are covered in this research
