this book offers the latest research results on analog side channels and their usage in cybersecurity it demystifies analog side channels and demonstrates new use cases for them the first part of this book discusses how analog side channels are generated the physics behind it the modeling and measurements of analog side channels and their analogies to wireless communication systems the second part of this book introduces new applications that benefit from leveraging side channels in addition to breaking cryptography algorithms it demonstrates how analog side channels can be used for malware detection program profiling hardware profiling hardware software attestation hardware identification and hardware trojan detection side channel is one of the methods for obtaining information about program execution traditionally they are used in computer science to extract information about a key in cryptographic algorithms what makes them different from other ways of extracting information about program execution is that side channels rely on how a system implements program execution rather than what the program s algorithm specifies analog side channels are particularly powerful because they are not easy to suppress or detect that someone is collecting information from the system although they are very powerful tools they are poorly understood this book targets advanced level students in computer science and electrical engineering as a textbook researchers and professionals working with analog side channels how to model them measure them improve signal to noise ratio and invent new signal processing techniques can also use this book computer scientists and engineers who want to learn new applications of side channels to improve system security new techniques for breaking cryptography keys new techniques for attestation and new techniques for hardware trojan detection will also want to purchase this book

first published in 1969 this study of literary reviewing in the early nineteenth century is concerned with contemporary criticism of the works of the major romantic poets wordsworth coleridge byron shelley and keats and of seven other notable romantic writers including hazlitt lamb and scott the criticism of all works in prose and verse excluding novels published by these writers between 1802 and 1824 is described and analysed this study also considers the policies and practices of the reviews and their political religious and moral attitudes in literary matters this title will be of interest to students of literature

efficient plastics can be found in high quality parts vital to the functioning of entire equipments and structures improved mechanical properties especially balance of stiffness and toughness are among the most frequently desired features of the new materials in addition reduced flammability is considered the single most important requirement for further expansion of plastics into large volume and demanding markets such as construction and mass transport production of power cables also requires flame retardant cable jacketing plastics to replace or at least to reduce consumption of environmentally unsound pvc the two principal ways to achieve the goals mentioned above include the development of completely new thermoplastic polymers and various modifications of the existing ones development and commercialization of a new thermoplastic require mobilization of large human and financial resources the latter being within the range from 100 million to 10 billion in comparison to 100 thousand to 10 million needed to develop and commercialize polymeric material with prescribed end use properties using physical or chemical modification of an existing plastic in addition the various markets utilizing thermoplastics demand large flexibility in material properties with only moderate volumes at the best

new insights from the archaeology and pottery of the sanctuary of hermes and aphrodite at syme viannou crete the sanctuary of hermes and aphrodite at syme viannou vii the greek and roman pottery presents in two volumes the greek and roman pottery recovered from the excavation of the sanctuary of syme viannou one of the most long lived and important cult sites of ancient crete and the aegean the site which is known as the cretan delphi was dedicated to hermes and aphrodite for much of its history the present study analyzes and catalogs 865 pieces dating from across the early first millennium bce to the mid first millennium ce kotsonas integrates traditional typological and chronological inquiries with contextual considerations macroscopic and petrographic analyses of ceramic fabrics and quantitative studies the resulting work provides detailed documentation of the pottery from syme viannou and explores its ritual and other roles within the diachronic panorama of cultic and other activities at the site it also supports a broader understanding of the role of ceramics in sanctuary contexts by introducing systematically comparative perspectives on the evidence of pottery from other cretan and greek sanctuaries volume 1 provides an introduction to the site of the sanctuary of syme viannou and its history and contains an analytical catalog of the ceramic remains

in august 1982 a group of 104 physicists from 70 laboratories of 31 countries met in erice to attend the 20th course of the international school of subnuclear physics the countries represented at the school were argentina australia austria belgium brazil bulgaria canada chile china czechoslovakia france the federal republic of germany greece india iran israel italy japan morocco the netherlands norway poland south africa spain sweden switzerland turkey the united kingdom the united states of america yugoslavia and zimbabwe the school was sponsored by the italian ministry of public education mpi the italian ministry of scientific and technological research mrsi the sicilian regional government and the weizmann institute of science this year on the occasion of the 60th birthday of chen ning yang the ettore majorana centre decided to pay tribute to the outstanding scientific achievements of one of the most prominent scientists of our time by dedicating the 20th course of the international school of subnuclear physics to a review of the present status of one of the fields of physics where chen ning yang has contributed most profoundly gauge interactions the theoretical foundations and the most recent developments were presented by chen ning yang the most general consequences of a gauge interaction supersymmetry with its theoretical aspects and the experimental implications were discussed by sergio ferrara and demetrios nanopoulos

now nearly forty years after its original translation into english roger asselineau s complete and magisterial biography of walt whitman will remind readers of the complex weave of traditions in whitman scholarship it is startling to recognize how much of our current understanding of whitman was already articulated by asselineau nearly half a century ago throughout its eight hundred pages the evolution of walt whitman speaks with authority on a vast range of topics that define both whitman the man and whitman the mythical personage remarkably most of these discussions remain fresh and relevant and that is in part because they have been so influential in particular the evolution of walt whitman inaugurated the study of leaves of grass as a lifelong work in progress and it marked the end of the habit of talking about leaves as if it were a single unified book asselineau saw whitman s poetry not as a body of static data but as a constantly changing continuum whose evolution must be carefully observed throughout evolution asselineau placed himself in the role of the observer analyzing whitman s development with a kind of scientific detachment but behind this objective persona burned the soul of a risk taker who was willing to rewrite whitman studies by bravely proposing what was then a controversial biographical source for whitman s art his homosexual desires the evolution of walt whitman is a reminder that extraordinary works of criticism never exist in and of themselves in this expanded edition roger asselineau has provided a new essay summarizing his own continuing journey with whitman a foreword by ed folsom editor of the walt whitman quarterly regards evolution as the genesis of contemporary whitman studies

the interfacial behaviour of surfactants and proteins and their mixtures is of importance in a wide range of areas such as food technology detergency cosmetics coating processes biomedicine pharmacy and biotechnology methods such as surface and interfacial tension measurements and interfacial dilation and shear rheology characterise the relationships between these interfacial properties and the complex behaviour of foams and emulsions is established recently developed experimental techniques such as frap which enable the measurement of molecular mobility in adsorption layers are covered in this volume the development of theories to describe the thermodynamic surface state or the exchange of matter for proteins and protein surfactant mixtures is also described features of this book reflects the state of the art research and application of protein interfacial layers rather than a snapshot of only some recent developments emphasis is placed on experimental details as well as recent theoretical developments new experimental techniques applied to protein interfacial layers are described such as frap or adsa or rheological methods to determine the mechanical behaviour of protein modified interfaces a large number of practical applications ranging from emulsions relevant in food technology for medical problems such as lung surfactants to the characterisation of foams intrinsic to beer and champagne production the book will be of interest to research and university institutes dedicated to interfacial studies in chemistry biology pharmacy medicine and food engineering industrial departments for research and technology in food industry pharmacy medicine and brewery research will also find this volume of value

landscapes of the past have always held an inherent fascination for geologists because like terrestrial sediments they formed in our environment not offshore on the sea floor and not deep in the subsurface so a walk across an ancient karst surface is truly a step back in time on a surface formed open to the air long before humans populated the globe ancient karst with its associated subterranean features is also of great scientific interest because it not only records past exposure of parts of the earth's crust but preserves information about ancient climate and the movement of waters in paleoquifers because some paleokarst terranes are locally hosts for hydrocarbons and base metals in amounts large enough to be economic buried and exhumed paleokarst is also of inordinate practical importance this volume had its origins in a symposium entitled paleokarst systems and unconformities characteristics and significance which was organized and convened by us at the 1985 midyear meeting of the society of economic paleontologists and mineralogists on the campus of the colorado school of mines in golden colorado the symposium had its roots in our studies over the last decade both separately and jointly of a number of major and minor unconformities and of the diverse and often spectacular paleokarst features associated with these unconformities
