throughout history farm families have shared work and equipment with their neighbours to complete labour intensive time sensitive and time consuming tasks they benefitted materially and socially from these voluntary flexible loosely structured networks of reciprocal assistance making neighbourliness a vital but overlooked aspect of agricultural change being neighbours takes us into the heart of neighbourhood the set of people near and surrounding the family through an examination of work bees in southern ontario from 1830 to 1960 the bee was a special event where people gathered to work on a neighbour s farm like bees in a hive for a wide variety of purposes including barn raising logging threshing quilting turkey plucking and apple paring drawing on the diaries of over one hundred men and women catharine wilson takes readers into families daily lives the intricacies of their labour exchange and their workways feasts and hospitality through the prism of the bee and a close reading of the diaries she uncovers the subtle social politics of mutual dependency the expectations neighbours had of each other and their ways of managing conflict and crisis this book adds to the literature on cooperative work that focuses on evaluating its economic efficiency and complicates histories of capitalism that place communal values at odds with market orientation beautifully written engaging and richly detailed and illustrated being neighbours reveals the visceral textures of rural life

john milbank's theology has shaped much modern political thinking both within and without the church in before and beyond the big society joseph forde presents the first study devoted exclusively to john milbank's theology of welfare and how it has influenced policy in the church of england since 2008 by examining the favourable response the church gave to the big society project in 2010-12 forde shows that milbank's blue socialist fingerprint increasingly dominates however this theology has not evolved in a vacuum and forde expertly places it in its historical and theoretical context he offers a detailed critical discussion of milbank's own critique of what has been the mainstream temple anglican theology of welfare in the church of england since the 1940s and a fresh contribution to the assessment of anglican social theology finally he demonstrates how milbank's ideas have been furthered by other influential anglicans it is this influence that will carry the greatest implications for

the church of england s policy on welfare going forward making this study relevant to all who care about its contribution to the provision of welfare

sunday times and guardian books of the year 2017 comprehensive and compelling a nuanced landmark study that has deservedly won plaudits from both palestinian and israeli historians justin marozzi the times a century after britain's balfour declaration promised a jewish national home in palestine veteran guardian journalist ian black has produced a major new history of one of the most polarising conflicts of the modern age drawing on a wide range of sources from declassified documents to oral testimonies and his own decades of reporting enemies and neighbours brings much needed perspective and balance to the long and unresolved struggle between arabs and jews in the holy land beginning in the final years of ottoman rule and the british mandate period when zionist immigration transformed palestine in the face of mounting arab opposition the book re-examines the origins of what was a doomed relationship from the start it sheds fresh light on critical events such as the arab rebellion of the 1930s israel's independence and the palestinian catastrophe nakba in arabic of 1948 the watershed of the 1967 war two intifadas the oslo accords and israel's shift to the right it traces how after five decades of occupation ever expanding jewish settlements and the construction of the west bank separation wall hopes for a two state solution have all but disappeared and explores what the future might hold yet black also goes beyond the most

since the financial crisis in 2008 germany has performed economically far better than most of its neighbouring countries what makes germany so special that nobel prize winner krugman called it a german miracle and is this sustainable is it its strong economic and political institutions in particular trade unions which by international comparison are a solid rock in turbulent waters its vocational training which guarantees high skilled labour and low youth unemployment its social partnership agreements which showed large flexibility of working time arrangements during the crisis and turned the rock into a bamboo flexibly bending once the rough wind of globalization was blowing or was it simply luck booming exports to china and the east a shrinking population or worse so a demolition of the german welfare state all along from miracle to fate to shame of the german model is there such a thing like a core of germany the debate on the german model is controversial within germany but what do neighbours think about germany the nordic countries want to copy german labor market institutions the western countries admire it for its high flexibility within stable institutions the austrians have a similar model but question germany's welfare arrangements and growth capacities many eastern european countries are relatively silent about the german model there is admiration for the german economic success but at the same time not so much for its institutions and certainly not for its restrictive migration policy the southern countries see it as a preposterous pain to europe by shaping eu policy a la germany and forcing austerity policy at the costs of its neighbours can the german model be copied and what do neighbours recommend germany to do

this book enriches unsupervised outlier detection research by proposing several new distance based and density based outlier scores in a k nearest neighbors setting the respective chapters highlight the latest developments in k nearest neighbor based outlier detection research and cover such topics as our present understanding of unsupervised outlier detection in general distance based and density based outlier detection in particular and the applications of the latest findings to boundary point detection and novel object detection the book also offers a new perspective on bridging the gap between k nearest neighbor based outlier detection and clustering based outlier detection laying the groundwork for future advances in unsupervised outlier detection research the authors hope the algorithms and applications proposed here will serve as valuable resources for outlier detection researchers for years to come
