the advent of sophisticated packaging materials and methods had stimulated the development of complex delivery systems from producer to consumer resulting in the availability of a wide range of products at an affordable price contemporary distribution methods are not without problems however and specifically related to packaging is the possibility of migration the contamination of food by components of the materials in contact with it in this area both technology and regulations are well developed but basic science for a variety of reasons has tended to advance less quickly this book addresses the basic science of migration the editor has brought together a range of authors all of whom are acknowledged experts in their fields to provide a timely and concise overview of this important topic covering basic science common materials and the major regulations in north america europe and japan this book will become a key information source in every library concerned with food technology food technologists manufacturers of packaging and other food contact materials and regulatory professionals will all find this book an indispensable reference source

Additive Migration from Plastics Into Foods 2007

plastics are now being used on a large scale for the packaging of fatty and aqueous foodstuffs and beverages both alcoholic and non alcoholic thus it is likely that some transfer of polymer additives will occur adventitious impurities such as monomers oligomers catalyst remnants and residual polymerisation solvents and low molecular weight polymer fractions from the plastic into the packaged material with the consequent risk of a toxic hazard to the consumer this book covers all aspects of the migration of additives into food and gives detailed information on the analytical determination of the additives in various plastics this

book will be of interest to those engaged in the implementation of packaging legislation including management analytical chemists and the manufacturers of foods beverages pharmaceuticals and cosmetics and also scientific and toxicologists in the packaging industry

Additive Migration from Plastics Into Food *2013-10-22*

additive migration from plastics into food examines the intrusion of foreign chemicals into food via additives present in plastics packaging and the toxic hazards they pose to consumers this book shows how direct contact between the packed commodity and the plastic is likely to result in the transfer of polymer additives adventitious impurities such as monomers catalyst remnants and residual polymerization solvents and low molecular weight polymer fractions from the plastic into the packaged material this book is comprised of nine chapters and begins with a discussion on the various types of plastics used in food packaging as well as the types of substances present in the plastic that might migrate into the food subsequent chapters review world literature on extraction testing and the analysis of extractants the determination of various types of polymer additives and residual monomers in extractants of liquid foodstuffs and beverages solid foods edible oils and fatty foodstuffs is considered the final chapter looks at the legal requirements concerning the use of additives in food grade plastics in various countries this monograph will be of interest to those in the plastics industry food and beverage packaging industry and large retail outlets such as supermarkets along with medical and public health officials legislators environmentalists and the general public
