***resonant surface plasmons of a metal nanosphere can be* Dec 13 2022**

assuming that the resonant surface plasmons on a spherical nanoparticle is formed by standing waves of two counter propagating surface plasmon waves along the surface by using mie theory simulation we find that the dispersions of surface plasmon resonant modes supported by silver nanospheres match that of the surface plasmons on a semi infinit

resonant nanostructures for highly confined and ultra Aug 09 2022

abstract plasmonics on metal dielectric interfaces was widely seen as the main route for miniaturization of components and interconnect of photonic circuits however recently ultra confined surface phonon polaritonics in high index chalcogenide films of nanometric thickness has emerged as an important alternative to plasmonics
