Transforming the Workforce for Children Birth Through Age 8 2015-07-23 children are already learning at birth and they develop and learn at a rapid pace in their early years this provides a critical foundation for lifelong progress and the adults who provide for the care and the education of young children bear a great responsibility for their health development and learning despite the fact that they share the same objective to nurture young children and secure their future success the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well transforming the workforce for children birth through age 8 explores the science of child development particularly looking at implications for the professionals who work with children this report examines the current capacities and practices of the workforce the settings in which they work the policies and infrastructure that set qualifications and provide professional learning and the government agencies and other funders who support and oversee these systems this book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals these detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning shared knowledge and competencies for care and education professionals and principles for effective professional learning young children thrive and learn best when they have secure positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress transforming the workforce for children birth through age 8 offers guidance on system changes to improve the quality of professional practice specific actions to improve professional learning systems and workforce development and research to continue to build the knowledge base in ways that will directly advance and inform future actions the recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive and ultimately improve outcomes for children

From Neurons to Neighborhoods 2000-11-13 how we raise young children is one of today's most highly personalized and sharply politicized issues in part because each of us can claim some level of expertise the debate has intensified as discoveries about our development in the womb and in the first months and years have reached the popular media how can we use our burgeoning knowledge to assure the well being of all young children for their own sake as well as for the sake of our nation drawing from new findings this book presents important conclusions about nature versus nurture the impact of being born into a working family the effect of politics on programs for children the costs and benefits of intervention and other issues the committee issues a series of challenges to decision makers regarding the quality of child care issues of racial and ethnic diversity the integration of children's cognitive and emotional development and more authoritative yet accessible from neurons to neighborhoods presents the evidence about brain wiring and how kids learn to speak think and regulate their behavior it examines the effect of the climate family child care community within which the child grows

Progress, Change and Development in Early Childhood Education and Care

2017-10-02 in 2000 the millennium development goals set out targets aimed at creating a safer more prosperous and more equitable world if these goals were to be achieved children's lives would indeed be transformed in this collection achievements against these targets are identified with evidence on taxation and examining the progress made in early years provision in Australia China and greece the netherlands portugal south africa and sweden they highlight the 2023-06-09 and agendas of their respective governments and focus on the trends and issues which are particularly relevant to each situation the report reveals fiscal policy critical issues in environmental taxation series

the social and educational inequalities that persist across countries a common theme running through this volume concerns the political tensions that arise when governments and educators hold fundamentally different views about the nature and purpose of early years education and the needs of children and families it is clear that although the past two decades have seen many changes in attitude towards the importance of the early years of life politically economically and environmentally much still remains to be done if the millennium development goals for young children and their families are to be fully met despite this this volume demonstrates that those who work in this area continue to experience a deep concern for the well being of young children which transcends cultures frontiers and political and sectarian divides this book was originally published as a special issue of the international journal of early years education

Understanding Behaviour and Development in Early Childhood 2010-10-04 in this accessible and thought provoking text the author examines the behaviour of babies and young children in a developmental context and takes into account the shifts and changes over time as young children grow and mature understanding behaviour and development in early childhood reveals for example how behaviour perceived as difficult in a young child may be the manifestation of a response to emotional sensory and cognitive experiences throughout the book readers will find a strong emphasis on emotional well being and the need to place our understanding of behaviour within a developmental time frame based on wide ranging professional experience the topics examined and discussed in this insightful book include what we understand by behaviour how the brain and senses work and mature during early childhood behaviour as a reflection of the child s internal state what emotions are and how we learn what feelings mean to us as individuals how emotions affect our ability to learn how we develop a sense of self the book provides suggestions for how adults may think about and respond to changes in children s behaviour and how we may support children in learning how to manage their own behaviour as they grow older and encounter wider and more complex situations understanding the meaning of behaviour is a constant challenge for anyone working with children this developmental approach promotes a helpful reflective stance for practitioners and students working in early childhood education and care

warning true do all the doors shut if baby's brain doesn't get just the right amount of stimulation during the first three years of life have discoveries from the new brain science really proved that parents are wholly responsible for their child's intellectual successes and failures alike are parents losing the brain wars no argues national expert john bruer in the myth of the first three years he offers parents new hope by debunking our most popular beliefs about the all or nothing effects of early experience on a child's brain and development challenging the prevailing myth heralded by the national media head start and the white house that the most crucial brain development occurs between birth and age three bruer explains why relying on the zero to three standard threatens a child's mental and emotional well being far more than missing a few sessions of toddler gymnastics too many parents educators and government funding agencies he says see these years as our main opportunity to shape a child's future bruer agrees that valid scientific studies do support the existence of critical periods in brain development but he painstakingly shows that these same brain studies prove that learning and cognitive development occur throughout childhood and indeed one's entire life making hard science comprehensible for all readers bruer marshals the neurological and psychological evidence to show that children and adults have been hardwired for lifelong learning parents have been sold a bill of goods that is highly destructive because it overemphasizes infant and toddler nurturing to the detriment of long term parental and educational responsibilities the myth of the first three years is a bold and controversial book because it urges parents and decision makers alike to consider and debate for themselves the evidence for lifelong learning opportunities but more than anything this book spreads a message of hope while there are no quick fixes conscientious parents and committed educators can make a difference in every child's life from infancy through childhood and beyond

Early Childhood Development 2018 this is a book about the development of action and skill in the first years of life but it differs in an important way from most past treatments of the subject the present volume explores how the development of action is related to the contexts especially the social ones in which actions function in past work little attention has focused on this relationship the prevailing view has been that infants develop skills on their own independent of contributions from other individuals or the surrounding culture the present volume is a challenge to that view it is based on the premise that many early skills are embedded in interpersonal activities or are influenced by the activities of other individuals it assumes further that by examining how skills function in interpersonal contexts insights will be gained into their acquisition and structuring in effect this volume suggests that the development of cognitive perceptual and motor skills needs to be reexamined in relation to the goals and contexts that are inherently associated with these skills the contributors to the volume have all adopted this general perspective they seek to understand the development of early action by considering the functioning of action in context our motivation for addressing these issues stemmed in part from a growing sense of dissatisfaction as we surveyed the literature on skill development in early childhood

Encyclopedia of Infant and Early Childhood Development 2008-02-19 our goal in writing this book was to fill a perceived gap in the early experience literature most existing volumes on early experience and development are dichotomized on a basic versus an applied dimension volumes on the basic side are designed for researchers and theoreticians in the biomedical and natural sciences most existing basic volumes are either primarily based on infrahuman data or are based on single major human studies in going over fiscal policy critical issues in environmental taxation series

these volumes we are not convinced of the generality of infrahuman data to the human level in addition we were concerned about the replicability of findings from single studies however well designed these studies were as a result the relevance of data from these volumes to applied human problems is quite limited in contrast volumes falling on the applied side are designed primarily for those involved in intervention work with infants and young children these applied books generally tend to be vague and nonempirical compilations of the views of experts and the collective wisdom of the ages rarely in applied volumes do we find conclusions based on solid consistent empirical findings

Early Childhood Development 1995 information from neuroscience is growing and being properly used and misused which makes it imperative that educators receive accurate and practical information this book provides the accurate and practical information educators pre service and in service and caregivers serving children birth through age 8 need to know this volume takes a practical and cautionary stance it reminds educators to consider the ethical implications of neuroscience when it is applied to education reviews current findings from neuroscience and reveals the dangers of oversimplification and inappropriate extensions of neuroscience into curricula it brings together a group of authors with varied expertise writing on an array of inter related educational topics that will help educators use neuroscience to understand and address the cognitive emotional social and behavioral needs of all young children including those with exceptionalities they believe neuroscience can be insightful and useful to educators if applied ethically and with care the book offers strategies educators and caregivers can use to affect children today and the adults they can become

Multiple Perspectives on Play in Early Childhood Education 1998-01-01 the aim of this book is to define and discuss the key issues raised by new findings in the study of quantitative development one basic question addressed is how the abilities reported in infants and young children relate to later development in some accounts one is left with the impression that infants possess all the fundamental skills that make up mature quantitative reasoning according to this view subsequent development seems to consist of little more than the gradual expression of these skills in increasing complex and explicit tasks this is a major departure from previously held views of quantitative development such as that of piaget to evaluate these new claims authors will first review the abilities attributed to infants and then define the parameters of early childhood competencies comparing the two developmental periods the authors will evaluate the finding discuss the transition between these age periods and offer a framework for understanding later development of quantitative skills such as counting and calculation underlying the argument throughout will be an examination of the nativist versus empiricist debate that has taken center stage in infancy research
