process instrumentation control and automation is a component of encyclopedia of water sciences engineering and technology resources in the global encyclopedia of life support systems eolss which is an integrated compendium of twenty one encyclopedias the volume presents state of the art subject matter of various aspects of process instrumentation control and automation such as availability analysis of msf distillers using fault tree logic control schemes of cogenerating power plants for desalination fault diagnosis using artificial intelligence in thermal desalination systems fault diagnosis in chemical processes its relation to

thermal desalination systems introduction to process control
fundamentals of control theory process control systems
control valves actuators control valve positioners
automation and control of thermal processes automation
and control of electric power generation and distribution
systems steam turbines combined cycle and combined heat
and power processes fault detection and diagnostics of
failures this volume is aimed at the following five major
target audiences university and college students educators
professional practitioners research personnel and policy and
decision makers
