recognized as an essential component of chinese culture traditional chinese medicine tcm is both an ancient medical system and one still used widely in china today tcm s independently evolved knowledge system is expressed mainly in the chinese language and the information is frequently only available through ancient classics and confidential family records making it difficult to utilize the major concern in tcm is how to consolidate and integrate the data enabling efficient retrieval and discovery of novel knowledge from the dispersed data computational approaches such as data mining semantic reasoning and computational intelligence have emerged as innovative approaches for the reservation and utilization of this knowledge system typically this requires an inter disciplinary approach involving chinese culture computer science modern healthcare and life sciences this book examines the

computerization of tcm information and knowledge to provide intelligent resources and supporting evidences for clinical decision making drug discovery and education recent research results from the traditional chinese medicine informatics group of zhejiang university are presented gathering in one resource systematic approaches for massive data processing in tcm these include the utilization of modern semantic and data mining methods for more advanced data integration data analysis and integrative knowledge discovery this book will appeal to medical professionals life sciences students computer scientists and those interested in integrative complementary and alternative medicine interdisciplinary book bringing together traditional chinese medicine and computer scientists introduces novel network technologies to traditional chinese medicine informatics provides theory and practical examples and case studies of new techniques

this book natural products and cancer drug discovery is written by leading experts in natural products in cancer

therapy the first two sections describe new applications of common herbs and foods for treatment of cancer section 3 deals with the development of new chemotherapeutics from cannabis and endophytic fungi section 4 presented formulations of natural products for treatment of malignant melanoma made to order anticancer therapy from natural products using computational and tissue engineering approaches is addressed in the fifth section it is our hope that this book may motivate readers to approach the evidence of anticancer natural products with an open mind and thereby spark an interest in making further contributions to the cancer treatment efforts

Indian Medicinal Plants 1993

in the past there were many attempts to change natural foodstuffs into high value products cheese bread wine and beer were produced traditionally using microorganisms as biological tools later people influenced the natural process of evolution by artificial selection in the 19th century observations regarding the dependence of growth and reproduction on the nutrient supply led to the establishment of agricultural chemistry simultaneously efforts were directed at defining the correlation between special forms of morphological differentiation and related biochemical processes new experimental systems were developed after the discovery of phytohormones and their possible use as regulators of growth and differentiation in these systems intact plants or only parts of them are cultivated under axenic conditions these methods called in vitro techniques were introduced to modern plant breeding in the field of basic research plant cell cultures were increasingly developed and the correlations between biochemical processes and visible cell variations were explored further it should be possible to manipulate the basic laws of regulation and the respective biochemical processes should be regarded as being independent of morphological processes of plant development

a collection of test procedures for assessing the identity purity and content of medicinal plant materials including determination of pesticide residues arsenic and heavy metals intended to assist national laboratories engaged in drug quality control the manual responds to the growing use of medicinal plants the special quality problems they pose and the corresponding need for international guidance on reliable methods for quality control recommended procedures whether involving visual inspection or the use of thin layer chromatography for the qualitative determination of impurities should also prove useful to the pharmaceutical industry and pharmacists working with these materials

Practical Pharmacognosy 2008-09-07

this reference work provides a wealth of information regarding medicinal plants and phytochemicals it is addressed both to researchers and teachers the handbook describes phytochemicals which by the strictest definition are chemicals that are produced by plants during the last decades more and more groups became actively involved in exploring plants for useful metabolites that lead to the identification of several useful curative agents and many promising molecules to fight and or prevent diseases including carcinogenesis and stroke but when we talk about phytochemicals there are also medicinal plants where not a single molecule is responsible for the observed properties this reference work therefore reviews and compiles the information on both these aspects the volumes contain contributions on phytochemicals and herbal extracts a large number of natural products obtained from plants and microorganisms is used in cosmetic drug flavor and fragrance industries for this compilation a range of the most important medicinal herbs and phytochemicals were selected and are described by the recognized authors in the field the present reference work encompasses the information about well established phytochemicals biology and biotechnology of medicinal plants or their products their biosynthesis novel production strategies demand and uses metabolism and bioavailability there is a surge of information published in recent years on herbal medicine and their pharmacologic effects with single books available on varied subjects however all this information is widespread and difficult to overview researchers who wish to keep a pace with the rapidly developing field of natural products can now consult this newly compiled handbook to find all information about bioactive molecules and medicinal plants thoroughly compiled in one place
