The Art and Practice of Landscape Gardening 1890

while we all live our lives in designed landscapes of various types only on occasion do we consider what these landscapes mean to us and how they have acquired that significance can a landscape architect or garden designer really imbue new settings with meaning or does meaning evolve over time created by those who perceive and use these landscapes what role does the selection and arrangement of plants and hard materials play in this process and just where does the passage of time enter into the equation these questions collectively provide the core material for meaning in landscape architecture and gardens a compendium of four landmark essays written over a period of twenty years by leading scholars in the field of landscape architecture new commentaries by the authors accompany each of the essays and reflect on the thinking behind them as well as the evolution of the author s thoughts since their original publication although the central theme of these writings is landscape architecture broadly taken the principal subject of several essays and commentaries is the garden a subject historically plentiful in allusions and metaphors as a whole meaning in landscape architecture and gardens offers the general reader as well as the professional a rich source of ideas about the designed landscape and the ways by which we perceive consider react and dwell within them and what they mean to us the essays have been perennial favorites in landscape courses since their original publication in landscape journal bringing them together bolstered by the new commentaries creates a book valuable to all those creating gardens and landscapes as well as those teaching and studying these subjects

Meaning in Landscape Architecture and Gardens 2011-03

between 1937 and 1938 garden designer christopher tunnard published a series of articles in the british architectural review that rejected the prevailing english landscape style inspired by the principles of modernist art and japanese aesthetics tunnard called for a new technique in garden design that emphasized an integration of form and purpose the functional garden avoids the extremes both of the sentimental expressionism of the wild garden and the intellectual classicism of the formal garden he wrote it embodies rather a spirit of rationalism and through an aesthetic and practical ordering of its units provides a friendly and hospitable milieu for rest and recreation tunnard s magazine pieces were republished in book form as gardens in the modern landscape in 1938 and a revised second edition was issued a decade later taken together these articles constituted a manifesto for the modern garden its influence evident in the work of such figures as lawrence halprin philip johnson and edward larrabee barnes long out of print the book is here reissued in a facsimile of the 1948 edition accompanied by a contextualizing foreword by john dixon hunt gardens in the modern landscape heralded a sea change in the evolution of twentieth century design and it also anticipated questions of urban sprawl historic preservation and the dynamic between the natural and built environments available once more to students practitioners and connoisseurs it stands as a historical document and an invitation to continued innovative thought about landscape architecture

Gardens in the Modern Landscape 2014-07-23

this book provides an overview of the extent to which the 18th century english landscape garden spread through europe and russia while this type of garden acted widely as an inspiration it was not slavishly copied but adapted to local conditions circumstances and agendas a garden in the english style is commonly used to denote a landscape garden in europe while the term landscape garden is used for layouts that are naturalistic in plan and resemble natural scenery though they might be highly contrived and usually large in scale the landscape garden took hold in mainland europe from about 1760 due to the differing geopolitical character of several of the countries and a distinct division between catholic and protestant the notion of the landscape garden held different significance and was interpreted and applied variously in those countries in other words they found it a very flexible medium each country is considered individually with a special chapter devoted to le jardin anglo chinois since that constitutes a major issue of its own the gardens have been chosen to illustrate the range and variety of applications of the landscape garden though they are also those about which most is known in english

What Gardens Mean 2001-03

it is said that the only great aesthetic contribution made to the arts by the english is the landscape garden in england in the eighteenth century the conventional formal gardens planned on a rigidly geometric basis and owing much to the influence of andre le notre louis xiv s great designer at versailles were within a comparatively short period swept away so thoroughly that only a handful remain in recognizable form today and they were replaced by gardens of the type the french called le jardin anglais this book explain the factors that caused this revolution how english aristocrats making the grand tour of europe wanted their estates to resemble the classical landscapes depicted by continental painters how the attitude of cultured people towards rugged countryside and untamed nature changed from fear and hatred to romantic awe how political dislike of the power of the french monarchy led to a reaction against the french style of gardening mr hadfield quotes from addison and pope who inveighed against the formal style and advocated gardens more in sympathy with nature and he follows the development of the english style at castle the pioneering personalities both landowners men such as the earl of carlisle viscount cobham and henry hoare and those they employed charles bridgeman william
