the block is no more than the land and building area defined by streets it is the nature of the interface between the two which has a critical impact on the quality of the spaces between those buildings the importance of the block to city life is well rehearsed and in any case we seldom find ourselves in the business of making cities from scratch but we are in the business of making new houses neighbourhoods and new local centres and we need lots of them 250 000 a year to be imprecise against the background of a burgeoning housing shortage in the uk there are varied issues to be reconciled the urban block charts the fall and rise of the perimeter block as the staple of urban form and structure from ancient times it takes you through the process of understanding defining structuring

and designing the block carefully selected urban and suburban case examples explain do s and don ts of good block layout and will help you to produce better masterplans while staying in touch with commercial realities
