**General Science (2022-23 RRB)** 2015-11-13 is knowledge discovered or just invented can we ever get outside ourselves to know how reality is in itself

independent of us philosophical realism raises the question whether in our knowing we connect with an independent reality or only connect with our own mental constructs far from being a silly parlor game the question impacts our lives concretely and deeply modern western culture has been infected with antirealism and the doubt skepticism subjectivism relativism and atheism that attends it not to mention distrust and arbitrary mis use of reality premier scientist turned philosopher michael polanyi stepped aside from research to offer an innovative account of knowing that takes its cue from how discovery actually happens polanyi defied the antirealism of the twentieth century sounding a ringing note of hope in his repeated claim that in discovery we know we have made contact with reality because we have a sense of the possibility of indeterminate future manifestations and that sense marks contact with reality because it is the way reality is abundant generous and fraught with as yet unnameable possibilities this book examines that distinctive claim contrasting it to the wider philosophical discussions regarding realism and antirealism in the recent decades it shows why polanyi s outlook is superior and why that matters not just to scientific discoverers but to us all

**The Journal [afterw.] The Madras journal of literature and science, ed. by J.C. Morris** 1861 human influences create both environmental problems and barriers to effective policy aimed at addressing those problems in effect environmental managers manage people as much as they manage the environment therefore they must gain an understanding of the psychological and sociopolitical dimensions of environmental problems that they are attempting to resolve in

*Review of Medical Physiology* 2019-08-29 in its concern with science as an essentially human enterprise science faith and society makes an original and challenging contribution to the philosophy of science on its appearance in 1946 the book quickly became the focus of controversy polanyi aims to show that science must be understood as a community of inquirers held together by a common faith science he argues is not the use of scientific method but rather consists in a discipline imposed by scientists on themselves in the interests of discovering an objective impersonal truth that such truth exists and can be found is part of the scientists faith polanyi maintains that both authoritarianism and scepticism attacking this faith are attacking science itself
