during the last three decades reflections on the growth of scientific knowledge have inspired historians sociologists and some philosophers to contend that scientific objectivity is a myth in this book kitcher attempts to resurrect the notions of objectivity and progress in science by identifying both the limitations of idealized treatments of growth of knowledge and the overreactions to philosophical idealizations recognizing that science is done not by logically omniscient subjects working in isolation but by people with a variety of personal and social interests who cooperate and compete with one another he argues that nonetheless we may conceive the growth of science as a process in which both our vision of nature and our ways of learning more about nature improve offering a detailed picture of the advancement of science he sets a new agenda for the philosophy of science and for other science studies disciplines
