the petroleum industry in general has been dominated by engineers and production specialists the upstream segment of the industry is dominated by drilling completion engineers usually neither of those disciplines have a great deal of training in the chemistry aspects of drilling and completing a well prior to its going on production the chemistry of drilling fluids and completion fluids have a profound effect on the success of a well for example historically the drilling fluid costs to drill a well have averaged around 7% of the overall cost of the well before completion the successful delivery of up to 100% of that wellbore in many cases may be attributable to the fluid used considered the bible of the industry composition and properties of drilling and completion fluids first written by walter rogers in 1948 and updated on a regular basis thereafter is a key tool to achieving successful delivery of the wellbore in its sixth edition composition and properties of drilling and completion fluids has been updated and revised to incorporate new information on technology economic and political issues that have impacted the use of fluids to drill and complete oil and gas wells with updated content on completion fluids and reservoir drilling fluids health safety environment drilling fluid systems and products new fluid systems and additives from both chemical and engineering perspectives wellbore stability adding the new r d on water based muds and with increased content on equipment and procedures for evaluating drilling fluid performance in light of the advent of digital technology and better manufacturing techniques composition and properties of drilling and completion fluids has been thoroughly updated to meet the drilling and completion engineer s needs explains a myriad of new products and fluid systems cover the newest api si standards new r d on water based muds new emphases on health safety environment new chapter on waste management and disposal
