the helium atom has two electrons bound to a nucleus with charge $z = 2$ the successive removal of the two electrons can be diagrammed as $\text{He} \rightarrow \text{He}^+ \rightarrow \text{He}^{2+}$ the first ionization energy i_1 the minimum energy required to remove the first electron from helium is experimentally 24 59 eV

examples of some neutral atoms and their electron configurations are shown below in this table you can see that helium has a full valence shell with two electrons in its first and only 1n shell similarly neon has a complete outer 2n shell containing eight electrons these electron configurations make helium and neon very stable
