surround sound is the term for audio that gives the impression that it's not simply coming from in front of you via one or two channels but from all around you. It's a complex technology with surround sound is achieved by manipulating audio via various receiver and speaker configurations to create an immersive experience. These usually comprise a central speaker, several satellite speakers. Surround sound is exactly what it sounds like: a category of products and technologies designed to immerse you in audio from all sides, all angles, and increasingly from all heights too. What is surround sound? In short, surround sound helps you feel like you're in the middle of whatever is happening on screen. Like its name suggests, this technique is used to create an immersive audio experience that feels like it's completely surrounding you. Figuring out a proper 5.1 or 7.1 surround sound configuration can be confusing at worst and tedious at best. We're here to help expedite the process so you can spend more time enjoying your movies and TV shows. Adding a surround sound system is a great way to enhance your home movie watching and gaming experience. A standard stereo system has two speaker channels placed in front of the left and right. A surround sound system adds an additional speaker in the center and at least 2 more speakers behind to simulate sound coming from all directions.
