antitrust law enhances competition among firms and keeps prices low for goods and services less well known antitrust law also applies to anticompetitive conduct by employers in labor markets which pushes wages below the competitive rate yet there have been few labor market cases or enforcement actions and almost no scholarly commentary on the role of antitrust law in labor markets this book fills the gap it explains why antitrust law has failed to address labor market concentration and how it can be reformed so that it does a better job essential reading for anyone interested in fighting economic inequality how antitrust failed workers also offers a sharp primer on the true nature of the american economydlone that is increasingly uncompetitive and tilted against workers this book examines the movement for living wages at the local level and what it tells us about urban politics oren m levin waldman studies the role that living wage campaigns may have had in recent years in altering the political landscape in four cities where they have been adopted los angeles detroit baltimore and new orleans it is the author s belief that the living wage movements are a result of policy failure at the local level they are the by product of the failure to adequately address the changes that were occurring mainly the changing urban economic base and growing income inequality the author undertakes a scholarly analysis of the issue through the disciplinary lenses of political science while also employing some of the economists tools as the united states continues its slow climb out of the great recession it is important to focus on new directions to improve the standard of living in america this book explores what is behind a faltering standard of living in the united states since the early 1980s and what can be done to restore it the book is uniquely valuable in going beyond mainstream thinking about how to restore prosperity economics has traditionally equated economic growth increases in per capita income with improvements in quality of life and the standard of living this book questions that assumption the different chapters in the book show the standard of living as being more than income to include many non market aspects such as access to public goods roads clean air and water schools parks and museums intangible aspects of quality of life such as equity and a sense of community and broadly based economic opportunities this means that improving the standard of living is a multi dimensional challenge rather than one of solely increasing aggregate demand productivity or gdp this book embodies a pluralistic approach and draws on the expertise of a wide array of thinkers the intended audience is for various courses offered in economics sociology political science public policy programs and in environmental and ecological studies rethinking disaster recovery focuses attention on the social inequalities that existed on the gulf coast before hurricane katrina and how they have been magnified or altered since the storm with a focus on social axes of power such as gender sexuality race and class this book tells new and personalized stories of recovery that help to deepen our understanding of the disaster specifically the volume examines ways in which gender and sexuality issues have been largely ignored in the emerging post katrina literature the voices of young racial and ethnic minorities growing up in post katrina new orleans also rise to the surface as they discuss their outlook on future employment environmental inequities and the slow pace of recovery for many parts of the city are revealed through narrative accounts from volunteers helping to rebuild scholars who were themselves impacted tell personal stories of trauma displacement and recovery as they connect their biographies to a larger social context these insights into the day to day lives of survivors over the past ten years help illuminate the complex disaster recovery process and provide key lessons for all too likely future disasters how do experiences of recovery vary along several axes of difference why are some able to recover quickly while others struggle what is it like to live in a city recovering from catastrophe and what are the prospects for the future through on the ground observation and keen sociological analysis rethinking
