## **switch mode power supply calculating efficiency of an smmps Oct 31 2023**

power supply efficiency is calculated by the ratio of how much power is transferred to its output compared to the total energy consumed by the power supply so the formula is  $\text{efficiency} = \frac{\text{output power}}{\text{input power}}$  this circuit schematic created using circuitlab this is typically measured with an 80 of the total load for example if i had a power supply that outputs

## **isolated flyback smmps design digikey digi key electronics Sep 29 2023**

to solve the problem of efficient and reliable power delivery in a small form factor power supply designers are using switch mode power supplies smmps with a flyback topology this topology useful to power levels of up to 150 watts offers designs with low component count for small size and low cost
