bioinformatics derives knowledge from computer analysis of biological data in particular genomic and transcriptomic datasets are processed analysed and whenever possible associated with experimental results from various sources to draw structural organizational and functional information relevant to biology

research in bioinformatics includes method development for storage retrieval and analysis of the data bioinformatics in aquaculture provides the most up to date reviews of next generation sequencing technologies their applications in aquaculture and principles and methodologies for the analysis of genomic and transcriptomic large datasets using bioinformatic methods algorithm and databases the book is unique in providing guidance for the best software packages suitable for various analysis providing detailed examples of using bioinformatic software and command lines in the context of real world experiments this book is a vital tool for all those working in genomics molecular biology biochemistry and genetics related to aquaculture and computational and biological sciences
