this book announces to the reader that allergens are molecules that's right you are not allergic to the entire ragweed plant the entire dust mite or the whole cow just one or more types of allergic molecule within each of those organisms if you are allergic to a molecule in a dust mite for example you might be allergic to shrimp or even tropical fish food if you are allergic to some pollens you could also be allergic to nuts fruits and some vegetables because they may share those pesky allergenic molecules some of these shared allergenic molecules have been identified by scientists and the reader will benefit by learning where they hide the readers unexplained reactions could be caused by these cross reactive molecules this is a situation where a little bit of knowledge is dangerous because cross reactivity as it is often briefly mentioned in magazines could create fear of foods alternatively knowledge about cross reactive molecules could uncover these specific allergens patients could easily avoid these cross reactive pollen molecules if they knew they were in their foods thereby eliminating much suffering from allergy why would a patient who tested positive to a pollen eat the same allergens in a food if they knew about cross reactivity they would not this book explains the allergic response and the many chemicals the body produces in response to an allergic reaction allergy is a serious medical condition and a patient can unintentionally make their allergic reaction much worse by exposure to a similar cross reactive allergen alternatively in addition to the patients chosen medical treatment knowing about cross reactivity can provide the patient with additional self help

scientific essay from the year 2016 in the subject medicine pharmacology pharmacy language english abstract asthma is a chronic disorder specifically characterized by severe inflammation and constriction mucus hyper secretion and hyper responsiveness in the airway allergic asthma aa is characterized by discontinuous airway obstruction that may cause temporary to severe asphyxiation and can consequence into death airway obstruction in asthma is because of rigorous inflammation concerning multi cellular components together with eosinophils neutrophils cd4 t lymphocytes mast cells with eosinophilic infiltration being the most conspicuous feature the multifaceted

phenotype of aa suggested being elevated from multiple interactions of infiltrating and structural cells that is coordinated by t helper 2 th2 cells consequential in chronic airway inflammation by extremely secreting convinced mediators like interleukin il 4 il 5 and il 13 which grasps a key point in asthma pathogenesis cause erratic degree of broncho obstruction increased mucus production and airway remodeling there are a variety of t cell which plays a significant role in aa that is th1 th2 th17 regulatory t cell th3 th22 th25 th9 and others there are various molecular signaling molecules such as stat4 foxp3 gata 3 and t bet which regulates cd4 t cells in aa nowadays the approach to manage asthma is based on inhaled bronchodilator and corticosteroids but the research is on the mechanism of some promising phytomedicines we summarized here with some mechanisms of some flavonoids to alleviate aa through cd4 t cells in conclusion we found that the cd4 t cell subpopulations played some major contribution in regulating modulating the aa and interestingly the natural potent anti oxidant anti inflammatory compounds such as flavonoids could able to attenuate the aa by regulating these subpopulations of cd4 t cells or the signaling molecules involved in the pathogenesis
