the past decade has seen a major resurgence in optics research and the teaching of optics throughout the major universities both in this country and abroad electrooptical devices have become a challenging form of study that has penetrated both the electrical engineering and the physics departments of most major schools there seems to be something challenging about a laser that appeals to both the practical electrical engineer with a hankering for fundamental research and to the fundamental physicist with a hankering to be practical somehow or other this same form of enthusiasm has not previously existed in the study of photoelectronic devices that form images this field of endeavor is becoming more and more sophisticated as newer forms of solid state devices enter the field not only in the data processing end but in the conversion of radiant energy into electrical charge patterns that are stored manipulated and read out in a way that a decade ago would have been considered beyond some fundamental limit or other it is unfortunate however that this kind of material has heretofore been learned only by the process of becoming an apprentice in one or more of the major development laboratories concerned with the manufacture of image intensifiers or television tubes or the production of systems employing these devices

quarrying and all other branches of surface mining rather than diminishing in importance have become of more and more consequence economically industrially and particularly with the depletion of high grade deep mined mineral reserves low grade minerals require low cost extraction and this in many cases necessitates very expensive mechanized equipment with the cost of individual units running into millions of pounds in the case of large scale operations with high productivity there has been and there still is a tendency for the smaller single quarries to be amalgamated into groups with large financial resources

and therefore with the ability to purchase these expensive machines so necessary to make operations viable this in turn requires wider administrative and technical knowledge in executives of these groups and as these often handle a wide range of products from widely differing systems of working this technical knowledge should embrace the exploitation of many different types of deposits there is at present a great dearth throughout the world of such qualified executives as is apparent from advertisements of vacancies in the technical press it would appear that these industries offer an attractive career to the widely qualified and experienced technologist in these fields this book deals with methods of working in the surface extractive industries quarry management and power supply but does not deal with related ancillary processes except where these affect quarrying operations

atkins physical chemistry molecular thermodynamics and kinetics is designed for use on the second semester of a quantum first physical chemistry course based on the hugely popular atkins physical chemistry this volume approaches molecular thermodynamics with the assumption that students will have studied quantum mechanics in their first semester the exceptional quality of previous editions has been built upon to make this new edition of atkins physical chemistry even more closely suited to the needs of both lecturers and students re organised into discrete topics the text is more flexible to teach from and more readable for students now in its eleventh edition the text has been enhanced with additional learning features and maths support to demonstrate the absolute centrality of mathematics to physical chemistry increasing the digestibility of the text in this new approach the reader is brought to a question then the math is used to show how it can be answered and progress made the expanded and redistributed maths support also includes new chemist s toolkits which provide students with succinct reminders of mathematical concepts and techniques right where they need them checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book to reinforce the main take home messages in each section the coupling of the broad coverage of the subject with a structure and use of pedagogy that is even more innovative will ensure atkins physical chemistry remains the textbook of choice for studying physical chemistry

the idea of understanding the present through its history is based on two insights first it helps to know where a technology comes from what were its predecessors how did they evolve as a result of the continuous efforts to solve theoretical and practical problems who were crucial in their emergence and which cultural differences made them develop into divergent families of artifacts second and closely related to the first insight how does a certain technology or system fit into its societal context its culture of mobility its engineering culture its culture of car driving its alternatives its opponents only thus by studying its prehistory and its socio cultural context can we acquire a true grasp of a technology the evolution of automotive technology a handbook second edition covers one and a quarter century of the automobile conceived as a cultural history of its technology aimed at engineering students and all those who wish to have a concise introduction into the basics of automotive technology and its long term development isbn 9781468605976 isbn 9781468605969 isbn 9781468605983 doi 10 4271 9781468605976 2nd edition

this doctoral thesis applies measurements of ground deformation from satellite radar using their potential to play a key role in understanding volcanic and magmatic processes throughout the eruption cycle however making these measurements is often problematic and the processes driving ground deformation are commonly poorly understood these problems are approached in this thesis in the context of the cascades volcanic arc from a technical perspective the thesis develops a new way of using regional scale weather models to assess a priori the influence of atmospheric uncertainties on satellite measurements of volcano deformation providing key parameters for volcano monitoring next it presents detailed geodetic studies of two volcanoes in northern california medicine lake volcano and lassen volcanic centre finally the thesis combines geodetic constraints with petrological inputs to develop a thermal model of cooling magma intrusions the novelty and range of topics covered in this thesis mean that it is a seminal work in volcanic and magmatic studies
