web wireless communications is the transmission of voice and data without cable or wires in place of a physical connection data travels through electromagnetic signals broadcast from sending facilities to intermediate and end user devices web apr 2 2024 wireless communication is a method of transmitting information from one point to other without using any connection like wires cables or any physical medium generally in a communication system information is transmitted from transmitter to receiver that are placed over a limited distance web wireless communication or just wireless when the context allows is the transfer of information telecommunication between two or more points without the use of an electrical conductor optical fiber or other continuous guided medium for the transfer the most common wireless technologies use radio waves web wireless communication involves transfer of information without any physical connection between two or more points because of this absence of any physical infrastructure wireless communication has certain advantages this would often include collapsing distance or space web a unified view of the fundamentals of wireless
