this book is based on a quantum course taught by the author to graduate students ms and phd at the physics department college of science baghdad university iraq for the period 1978 2007 also it is based on the author s experiences as a researcher and administrator to certain research institutions and scientific organizations it describes the quantum mechanics as a good tool to deal with studying of the properties of the microsystems molecules atoms nucleus nuclear particles subnuclear particles etc therefore this book in general deals with the following 1 the concept of the quanta plank experiment 2 duality property de broglie hypothesis 3 photoelectric effect 4 double slits experiment 5 wave mechanics and schrödinger equations 6 heisenberg concept of the new mechanics using the matrix concept 7 the schrödinger and heisenberg pictures 8 the interaction picture 9 the theory of transformation 10 the operator of transformation 11 the generator of the operator of rotation 12 the scattering theory 13 the addition of angular momenta 14 the approximation methods 15 basic elements of relativistic quantum mechanics 16 the introduction to the field theory 17 appendix a properties of delta function 18 appendix b whitticker equation solution 19 appendix c solved problems

this book is based on a nuclear physics course the author has taught to graduate students at the physics department college of science university of baghdad iraq for the period 1978 2007 also it is based on the author s experiences in the field of nuclear physics teaching

researching and administration of certain scientific institutions and organizations it consists of nine chapters and an appendix of some solved problems to illustrate the subject to the students as a textbook in nuclear physics it actually deals with the physics of the nucleus of the atom from the time of discovering the nucleus by the alpha particle scattering by gold film experiment by rutherford 1911 therefore it describes and demonstrates the following important subjects nuclear radius and shapes properties the nuclear force properties and features proposed nuclear models nuclear potential different suggested types nuclear constituents the protons p and the neutrons n the nucleon as identity to p and n according to the charge and energy state the angular momentum of the nucleus and its quadrupole moment the nuclear interactions the rotation properties of the nucleus the electromagnetic properties of the nucleus transitions properties and fermi golden rules beta decay and the nonconservation of parity and the cpt conservation the helicity nuclear particles physics solved problems
