a provocative description of the power of population change to create the conditions for societal transformation as the world nears 8 billion people the countries that have led the global order since world war ii are becoming the most aged societies in human history at the same time the world s poorest and least powerful countries are suffocating under an imbalance of population and resources in 8 billion and counting political demographer jennifer d sciubba argues that the story of the twenty first century is less a story about exponential population growth as the previous century was than it is a story about differential growth marked by a stark divide between the world s richest and poorest countries drawing from decades of research policy experience and teaching sciubba employs stories and statistics to explain how demographic trends like age structure and ethnic composition are crucial signposts for future violence and peace repression and democracy poverty and prosperity although we have a diverse global population demographic trends often follow predictable patterns that can help professionals across the corporate nonprofit government and military sectors understand the global strategic environment through the lenses of national security global health and economics sciubba

demonstrates the pitfalls of taking population numbers at face value and extrapolating from there instead she argues we must look at the forces in a society that amplify demographic trends and the forces that dilute them particularly political institutions or the rules of the game she shows that the most important skills in demographic analysis are naming and being aware of your preferences rethinking assumptions and asking the right questions provocative and engrossing 8 billion and counting is required reading for business leaders policy makers and anyone eager to anticipate political economic and social risks and opportunities a deeper understanding of fertility mortality and migration promises to point toward the investments we need to make today to shape the future we want tomorrow

from birth to death is a detailed analysis of how population statistics are collected in the united states particularly by the bureau of the census it describes the errors and other flaws typically found in such data petersen sets out the fundamentals of demography and reviews the current proposal to use sampling in the census he then reviews examples of how ignoring age and sex structure leads to false conclusions petersen explores race and ethnicity and the dilemmas inherent in the necessarily ambiguous definitions of these categories he also analyzes the problems of women who postpone having children to ages when risks of failure become significant the author also reviews the two most prominent population theories malthus and the fertility transition and questions why predictions of future population size are often completely wrong the final chapter discusses the pros and cons of state intervention in the control of fertility and efforts to cut family size in less developed countries and their unclear results a principal topic is the relative accuracy of population statistics and the degree to which one should accept data as published the main focus is on the united states and especially on the bureau of the census but general points are sometimes illustrated with examples of how data from other countries should be evaluated

this original and panoramic book proposes that the underlying forces of demography and globalisation will shortly reverse three multi decade global trends it will raise inflation and interest rates but lead to a pullback in inequality whatever the future holds the authors argue it will be nothing like the past deflationary headwinds over the last three decades have been primarily due to an enormous surge in the world s available labour supply owing to very favourable demographic trends and the entry of china and eastern europe into the world s trading system this book demonstrates how these demographic trends are on the point of reversing sharply coinciding with a retreat from globalisation the result ageing can be expected to raise inflation and interest rates bringing a slew of problems for an over indebted world economy but is also anticipated to increase the share of labour so that inequality falls covering many social and political factors as well as those that are more purely macroeconomic the authors address topics including ageing dementia inequality populism retirement and debt finance among others this book will be of interest and understandable to anyone with an interest on where the world s economy may be going
