## The Geography Behind History *1965*

in this book professor east discusses the vital relationship between history and geographical conditions drawing examples from ancient times up to the present he demonstrates that a study of history must include consideration of the physical conditions under which an event occurs and that the particular characteristics of this setting serve not only to localise but also to influence part at least of the action topographical position climate distribution of water and minerals the placement of routes and towns and ease or difficulty of movement between districts and countries are among the factors which the historian must take into account book jacket

## A Geography Of Time *2008-08-01*

in this engaging and spirited book eminent social psychologist robert levine asks us to explore a dimension of our experience that we take for granted our perception of time when we travel to a different country or even a different city in the united states we assume that a certain amount of cultural adjustment will be required whether it s getting used to new food or negotiating a foreign language adapting to a different standard of living or another currency in fact what contributes most to our sense of disorientation is having to adapt to another culture s sense of time levine who has devoted his career to studying time and the pace of life takes us on an enchanting tour of time through the ages and around the world as he recounts his unique experiences with humor and deep insight we travel with him to brazil where to be three hours late is perfectly acceptable and to japan where he finds a sense of the long term that is unheard of in the west we visit communities in the united states and find that population size affects the pace of life and even the pace of walking we travel back in time to ancient greece to examine early clocks and sundials then move forward through the centuries to the beginnings of clock time during the industrial revolution we learn that there are places in the world today where people still live according to nature time the rhythm of the sun and the seasons and event time the structuring of time around happenings when you want to make a late appointment in burundi you say i ll see you when the cows come in levine raises some fascinating questions how do we use our time are we being ruled by the clock what is this doing to our cities to our relationships to our own bodies and psyches are there decisions we have made without conscious choice alternative tempos we might prefer perhaps levine argues our goal should be to try to live in a multitemporal society one in which we learn to move back and forth among nature time event time and clock time in other words each of us must chart our own geography of time if we can do that we will have achieved temporal prosperity

## ***The Geography Behind History 1940***

despite the fact that the vast majority of the earth s surface is made up of oceans there has been surprisingly little work by geographers which critically examines the ocean space and our knowledge and perceptions of it this book employs a broad conceptual and methodological framework to analyse specific events that have contributed to the production of geographical knowledge about the ocean these include but are not limited to christopher columbus first transatlantic journey the mapping of nonexistent islands the establishment of transoceanic trade routes the discovery of largescale water movements the hms challenger expedition the search for the elusive terra australis incognita the formulation of the theory of continental drift and the mapping of the seabed using a combination of original empirical archival material and cartographic and theoretical sources this book uniquely brings together fascinating narratives throughout history to produce a representation and mapping of geographical oceanic knowledge it questions how we know what we know about the oceans and how this knowledge is represented and mapped the book then uses this representation and mapping as a way to coherently trace the evolution of oceanic spatial awareness in recent years particularly in historical geography discovering and knowing the ocean space has been a completely separate enterprise from discovering and colonising the lands beyond it there has been such focus on studying colonised lands yet the oceans between them have been neglected this book gives the geographical ocean a voice to be acknowledged as a space where history geography and indeed historical geography took place

this volume of especially commissioned essays explores the geography of and the role of geography in national and proto national identity place and national identity are bound together attachment to the one is almost always inseparable from the sense of the other yet as this volume shows the articulated self conscious linking of place and identity is by and large a modern phenomenon that took root in nineteenth century europe the formation of supranational states and the much vaunted

globalization of culture led many to believe there would be a progressive dilution of national identities and a growing agglomeration of places and nations into larger state units precisely the reverse has taken place this book explores the connections between identity and homeland showing how a place may be perceived as archetypal endowed with love and celebrated in music and poetry yet be a pretext for violence and war it examines the evolution of ideas about identity and their manifestations in a wide variety of settings from the former soviet union to the island states of the south pacific
