Central European Journal of Operations Research 2011-04-30 since the 1960s operations research or alternatively management science has become an indispensable tool in scientific management in simple words its goal on the strategic and tactical levels is to aid in decision making and on the operational level automate decision making its tools are algorithms procedures that create and improve solutions to a point at which optimal or at least satisfactory solutions have been found while many texts on the subject emphasize methods the special focus of this book is on the applications of operations research in practice typically a topic is introduced by means of a description of its applications a model is formulated and its solution is presented then the solution is discussed and its implications for decision making are outlined we have attempted to maximize the understanding of the topics by using intuitive reasoning while keeping mathematical notation and the description of techniques to a minimum the exercises are designed to fully explore the material covered in the chapters without resorting to mind numbing repetitions and trivialization
