Building a Low Impact Roundhouse

1990-05-23

explains how math skills are needed to build a skyscraper and includes math activities using real life data and facts about tall buildings

Building a House

2006

in this book of thirteen chapters howard davis uses historical contemporary and cross cultural examples to describe the nature and influence of these cultures he shows how building cultures reflect the general cultures in which they exist how they have changed over history how they affect the form of buildings and cities and how present building cultures which are responsible for the contemporary everyday environments may be improved jacket

Building Simple

2019-12-31

includes pictures includes accounts of the building written by participants includes a bibliography for further reading includes a table of contents i would give the greatest sunset in the world for one sight of new york s skyline the shapes and the thought that made them the sky over new york and the will of man made visible let them come to new york stand on the shore of the hudson look and kneel when i see the city from my window no i don t feel how small i am but i feel that if a war

came to threaten this i would like to throw myself into space over the city and protect these buildings with my body ayn
rand the fountainhead of all the great cities in the world few personify their country like new york city as america s largest
city and best known immigration gateway into the country the big apple represents the beauty diversity and sheer strength
of the united states a global financial center that has enticed people chasing the american dream for centuries given that
history it s no surprise that new yorkers have always wanted to construct the biggest and best structures possible even in
the early 1930s at the height of the great depression indeed those years produced the empire state building which remains
the city s most iconic building but new york s most famous skyscraper wouldn t have been possible without the chrysler
building a landmark in its own right that was the tallest building in the world for nearly a year before its more famous
counterpart s completion in fact the spirit of competition between the groups working on the two buildings helped ensure
that both look like they do today and the chrysler building only reached the height it did because a large skyscraper at 40
wall street was also trying to claim the mantle of tallest building at the same time the chrysler building was the first man
made object to surpass 1 000 feet in height and while it has been surpassed by considerably taller projects since it remains
the largest steel supported brick building in the world as its name suggests the chrysler building was named after walter p
chrysler who ran the car company at the time and yet his corporation never owned the building because he cherished it so
much that he personally paid for the skyscraper and kept it in his family although it has since been sold to new groups the
name has remained and the chrysler building continues to be a conspicuous part of the skyline in midtown the chrysler
building the history of new york city s most iconic landmark chronicles the construction and history of the one of the big
apple s most famous buildings along with pictures of important people places and events you will learn about the chrysler
building like never before in no time at all

Buildings for Education

Using Tools and Building a City in Minecraft

2007

constructing building enclosures investigates and interrogates tensions that arose between the disciplines of architecture
and engineering as they wrestled with technology and building cultures that evolved to deliver structures in the modern era
at the center of this history are inventive architects engineers and projects that did not settle for conventional solutions
technologies and methods comprised of thirteen original essays by interdisciplinary scholars this collection offers a critical
look at the development and the purpose of building technology within a design framework through two distinct sections the
contributions first challenge notions of the boundaries between architecture engineering and construction the authors then
investigate twentieth century building projects exploring technological and aesthetic boundaries of postwar modernism and
uncovering lessons relevant to enclosure design that are typically overlooked projects include louis kahn s weiss house
minoru yamasaki s science center sigurd lewerentz s chapel of hope and more an important read for students educators and
researchers within architectural history construction history building technology and design this volume sets out to disrupt
common assumptions of how we understand this history
