The Philosophy of Rudolf Carnap 1991

the first volume of the library of living philosophers llp appeared in 1939 the brainchild of the late professor paul a schilpp schilpp saw that it would help to eliminate confusion and endless sterile disputes over interpretation if great philosophers could be confronted by their capable philosophical peers and asked to reply as well as a number of critical essays with the chosen philosopher s replies to each essay each volume would include an intellectual autobiography and an up to date bibliography the llp series has exceeded even schilpp s expectations enabling great philosophers to do more than clarify by extending and elaborating their thoughts a volume in the library of living philosophers is not merely a commentary on a philosopher s work it is a critical part of that work

Erkenntnis Orientated: A Centennial Volume for Rudolf Carnap and Hans Reichenbach 2012-12-06

rudolf carnap was born on may 18 1891 and hans reichenbach on september 26 in the same year they are two of the greatest philosophers of this century and they are eminent representatives of what is perhaps the most powerful contemporary philosophical movement moreover they founded the journal erkenntnis this is ample reason for presenting on behalf of erkenntnis a collection of essays in honor of them and their philosophical work i am less sure however whether it is a good time for resuming their philosophical impact their work still is rather part than historical basis of the present philosophical melting pot their basic philosophical theses have currently it may seem not so high a standing but their impact can be seen in numerous detailed issues they have opened or pushed forward lively fields of research which are still very actively pursued not only within philosophy but also in many neighboring disciplines whatever the present balance of opinions about their philosophical ideas there is something even more basic in their philosophy than their tenets which is as fresh as stimulating as exemplary as ever i have in mind their way of philosophizing their

conception of how to do philosophy it is always a good time for reinforcing that conception and if this volume would manage to do so it would fully serve its purpose

Rudolf Carnap: Early Writings 2019-06-25

rudolf carnap 1891 1970 is generally acknowledged to have been one of the central figures of twentieth century philosophy he was the leading philosopher of the vienna circle a group that was central to the international movement known as logical empiricism which pursued the goal of making philosophy scientific and eliminating metaphysics that went beyond the limits of what humans can coherently comprehend carnap was not only well versed in this area of thought but also contrary ideas he interacted philosophically with gottlob frege bertrand russell ludwig wittgenstein edmund husserl and martin heidegger and in his formative years he was influenced by the positivists mach and ostwald neo kantians such as cassirer and natorp and husserl s phenomenology interest in logical empiricism waned in the decades following carnap s death but was revived towards the end of the twentieth century the wave of new scholarship that resulted identified carnap as far more subtle and

interesting than was previously understood the complete fourteen volume edition of carnap s published writings builds upon these more recent interpretations of his philosophy this first book contains carnap s early publications up until 1928 none of which have previously been translated from their original german the introduction and notes place the text in the relevant scientific and historical contexts in addition to explaining obscure references or outdated notation and terminology carnap s neo kantian origins are more obvious in these works than in his later writings and the overall figure which emerges from this volume is a very different carnap to the caricature that many philosophers will know

this institute s yearbook for the most part documents its recent activities and provides a forum for the discussion of exact philosophy logical and empirical investigations and analysis of language this volume holds a collection of papers on various aspects of the work of rudolf carnap by an international group of distinguished scholars

Rudolf Carnap and the Legacy of Logical Empiricism 2012-02-23

rudolf carnap and w v quine two of the twentieth century s most important philosophers corresponded at length and over a long period of time on matters personal professional and philosophical their friendship encompassed issues and disagreements that go to the heart of contemporary philosophic discussions carnap 1891 1970 was a founder and leader of the logical positivist school the younger quine 1908 began as his staunch admirer but diverged from him increasingly over questions in the analysis of meaning and the justification of belief that they remained close relishing their differences through years of correspondence shows their stature both as thinkers and as friends the letters are presented here in full for the first time the substantial introduction by richard creath offers a lively overview of carnap s and quine s careers and backgrounds allowing the nonspecialist to see their

writings in historical and intellectual perspective creath also provides a judicious analysis of the philosophical divide between them showing how deep the issues cut into the discipline and how to a large extent they remain unresolved

available for the first time in 20 years here are two important works from the 1920s by the best known representative of the vienna circle in the logical structure of the world carnap adopts the position of methodological solipsism and shows that it is possible to describe the world from the immediate data of experience in his pseudoproblems in philosophy he asserts that many philosophical problems are meaningless

An Introduction to the Philosophy of Science 1995-01-17

as a leading member of the vienna circle rudolph carnap s aim was to bring about a unified science by applying a method of logical analysis to the empirical data of all the sciences this work first published in english in 1934 endeavors to work out a way in which the observation statements required for verification are not private to the observer the work shows the strong influence of wittgenstein russell and frege

The Unity of Science 2013-05-13

this book is valuable as expounding in full a theory of meaning that has its roots in the work of frege and has been of the widest influence the chief virtue of the book is its systematic character from frege to quine most philosophical logicians have restricted themselves by piecemeal and local assaults on the problems involved the book is marked by a genial tolerance carnap sees himself as proposing conventions rather than asserting truths however he provides plenty of matter for argument anthony quinton hibbert journal

Logical Syntax of Language 2014-06-23

rudolf carnap 1891 1970 was the most important philosopher of the movement known as logical empiricism or logical positivism still the basis of much modern analytic philosophy it was long thought that this movement had been destroyed by the polemics of quine popper and kuhn but recently leading philosophers have been re appraising this verdict it is no longer universally agreed that quine or popper won their disputes with carnap and some have now been arguing that kuhn s ideas are as carnap himself thought perfectly compatible with logical empiricism this volume presents the latest contributions to this discussion from both sides and adds a number of new voices who look at carnap from a more international point of view bringing out for instance the roots of his thought in continental neo kantianism and dilthey s lebensphilosophie and stressing his deep commitment to political and cultural change carnap grew up in jena and in his student days was an active member there of the utopian sera group part of the german youth movement at the same time he was one of frege s few students and was deeply influenced by him

Introduction to Symbolic Logic and Its Applications 2012-07-12

this book is a major contribution to the history of analytic philosophy in general and of logical positivism in particular it provides the first detailed and comprehensive study of rudolf carnap one of the most influential figures in twentieth century philosophy the focus of the book is carnap s first major work *der logische aufbau der welt* the logical structure of the world it reveals tensions within the context of german epistemology and philosophy of science in the early twentieth century alan richardson argues that carnap s move to philosophy of science in the 1930s was largely an attempt to dissolve the tension in his early epistemology this book fills a significant gap in the literature on the history of twentieth century philosophy it will be of particular importance to historians of analytic philosophy philosophers of science and historians of science

Logic and Language 2010-12-25

it is not inaccurate to say that from 1928 to 1936 carnap was a member of the vienna circle even though during this period he was not always present in vienna during this years which spanned roughly the period from the *aufbau* to *testability and meaning* he worked or at least discussed frequently with the members of the group however traditionally it has been difficult to form a proper view of the development of carnap s ideas throughout this period mainly because of three errors which have persisted in the commonly accepted historical interpretation of carnap and the vienna circle emphasis on the circle as a unit rather than a collective of individuals insistence on verificationism as the defining characteristic of logical positivism and the systematic abstraction of the work of the circle from its historical context as against this historically distorted image this book argues for an alternative reading evaluating the different influences on carnap of schlick wittgenstein neurath and popper and making sense of carnap s evolution from physicalism to phenomenalism and the syntactic point of view

Meaning and Necessity 1988-02-15

rudolf carnap 1891 1970 is widely regarded as one of the most important philosophers of the twentieth century born in germany and later a us citizen he was a founder of the philosophical movement known as logical empiricism he was strongly influenced by a number of different philosophical traditions including the legacies of both kant and husserl and also by the german youth movement the first world war in which he was wounded and decorated and radical socialism this book places his central ideas in a broad cultural political and intellectual context showing how he synthesised many different currents of thought to achieve a philosophical perspective that remains strikingly relevant in the twenty first century its rich account of a philosopher s response to his times will appeal to all who are interested in the development of philosophy in the twentieth century

my endeavour in these pages is to explain the main features of the method of philosophizing which we the vienna circle use and by using try to develop further it is the method of the logical analysis of science or more precisely of the syntactical analysis of scientific language the purpose of the book as of the lectures is to give a first impression of our method and of the direction of our questions and investigations to those who are not yet acquainted with them from the preface

of contemporary historical and cultural influences such as the socio cultural setting in vienna and prague the correlation between logical empiricism and bauhaus modernism the connection to the life reform movement or the youth movement with its own life philosophy pursuing carnap s progression on a micro level of history and referring the results back to carnap s philosophy is now facilitated by recent access to his diaries from 1908 1935 these shorthand records reading lists travel reports and notes constitute a valuable source for the research of networks and social movements which left their mark on him

Two Essays on Entropy 2023-11-15

the continuing philosophical interest in the famous protocol sentence debate in the vienna circle of logical positivists is to a large measure due to the focus on the epistemological issues in the dispute and the neglect of differences among the leading players in their philosophical views of logic and language in protocols truth and convention the current understanding of the debate is advanced by developing the contemporaneous views of logic and language held by the principal disputants rudolf carnap and moritz schlick it is argued largely on the basis of unpublished manuscripts and correspondence that despite apparent differences in their respective conceptions of language there are nonetheless striking similarities particularly with respect to the conventionality of language nonetheless one key issue concerning the syntacticism inherent in carnap s early thirties philosophy separates the two viewpoints in the clash over protocols finally it is argued that carnap s syntacticism is untenable a conclusion that carnap himself finally reached in the closing exchanges of the protocol sentence controversy

Philosophy and Logical Syntax 1935

rudolf carnap 1891 1970 and w v o quine 1908 2000 have long been seen as key figures of analytic philosophy who are opposed to each other due in no small part to their famed debate over the analytic synthetic distinction this volume of new essays assembles for the first time a number of scholars of the history of analytic philosophy who see carnap and quine as figures largely sympathetic to each other in their philosophical views the essays acknowledge the differences which exist but through their emphasis on carnap and quine s shared assumption about how philosophy should be done that philosophy should be complementary to and continuous with the natural and mathematical sciences our understanding of how they diverge is also deepened this volume reshapes our understanding not only of carnap and quine but of

the history of analytic philosophy generally
