the topics every medical physicist should know tutorials in radiotherapy

physics advanced topics with problems and solutions covers selected advanced topics that are not thoroughly discussed in any of the standard medical physics texts the book brings together material from a large variety of sources avoiding the need for you to search through and digest the vast research literature the topics are mathematically developed from first principles using consistent notation clear derivations and in depth explanations the book offers insight into the physics of electron acceleration in linear accelerators and presents an introduction to the study of proton therapy it then describes the predominant method of clinical photon dose computation convolution and superposition dose calculation algorithms it also discusses the boltzmann transport equation a potentially fast and accurate method of dose calculation that is an alternative to the monte carlo method this discussion considers fermi eyges theory which is widely used for electron dose calculations the book concludes with a step by step mathematical development of tumor control and normal tissue complication probability models each chapter includes problems with solutions given in the back of the book prepares you to explore cutting edge research this guide provides you with the foundation to read review articles on the topics it can be used for self study in graduate medical physics and physics residency programs or in vendor training for linacs and treatment planning systems

what are the aims of sociology what are its objects of study how relevant is

the classical tradition to the practice of sociology today this volume brings together internationally renowned and new scholars to consider the changing relationship between contemporary and classical sociology arguing that recent historical and theoretical developments make reconsideration timely it suggests that whilst the classical tradition has a continuing pertinence it is inevitably subject to ongoing reconfiguration assessing the explanatory value of classical and contemporary forms of sociology interrogating social theory as both a form of explanation and a mode of practice and considering the possible consequences for the discipline of questions about its subject matter sociological objects steers a course between assertions about radical epistemological breaks on the one hand and reverence for the classical tradition on the other rather it emphasizes the value of reworking reconsidering and reconfiguring sociological thought

one stop reference helps you get the most out of applescript and automator one of the handiest ways to streamline your workload is to automate some of

your most routine computer tasks mac users are lucky in that they have
applescript and automator automation tools built right in this comprehensive
guide shows you how to tap both these useful mac features for mac os x and
regularly perform such tasks as extracting unread e mails from your mail
scheduling workflows and manually recording actions to create new automated
routines brings you up to speed on apple s built in automation tools for mac
os x including a more thorough look at automator than in many books and shows
you how you can automate many of your most repetitive or error prone tasks
explains how to automate aspects of some of your favorite mac features such
as ical mail iphoto itunes and idvd covers how to manipulate files and
folders work with pdfs emails and pages schedule workflows set up watch
folders create and use variables manually record actions and create
applescripts that further automate functions the instruction in this detailed
guide will help you increase your productivity using automator and
applescript note cd rom dvd and other supplementary materials are not
included as part of ebook file
