this book introduces a stability and control methodology named aeromech capable of sizing the primary control effectors of fixed wing subsonic to hypersonic designs of conventional and unconventional configuration layout control power demands are harmonized with static dynamic and maneuver stability requirements while taking the six degree of freedom trim state into account the stability and control analysis solves the static and dynamic equations of motion combined with non linear vortex lattice aerodynamics for analysis the true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration independent methodology concept the inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well known symmetric aircraft types contributes significantly to the overall technical complexity and level of abstraction the first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization the engineering scientific method itself is derived throughout the second half of the book this book offers a unique aerospace vehicle configuration independent generic methodology and mathematical algorithm the approach satisfies the initial technical quest how to develop a configuration stability control methodology module for an advanced multi disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations

this paper discusses commodity prices might serve as a useful leading indicator of inflation based on the relative importance of flexible auction markets for the determination of these prices they thus may have a tendency to respond relatively quickly especially in response to monetary disturbances estimation of alternative commodity price indexes in which the weights are chosen so as to minimize the residual variance in aggregate inflation regressions was not fully successful the commodity prices do have a useful role to play as an aid in predicting inflation so long as one is careful to interpret the relationships qualitatively and in the context of more general macroeconomic developments the ratio of consumer to commodity price movements changes over time and the relative price of commodities undergoes long sustained swings nonetheless the qualitative linkages are quite evident in the data perhaps most importantly turning points in commodity price inflation frequently precede turning points in consumer price inflation for the large industrial countries as a group

the story of kar kraft began as did many others in the automotive industry with an axe to grind in 1963 ford was seriously interested in purchasing ferrari ferrari was a legendary brand with considerable success in racing and ford saw the acquisition as a great way to be instantly successful in the racing arena when enzo ferrari realized that ford would not give him complete control of the racing program he backed out of the deal late in the process ford had spent millions in vetting and audits which then set in motion a vengeful response against ferrari the result was the unthinkable ford beat ferrari at le mans ford wanted to become competitive quickly but it did not have the race history or resources in house to remedy the situation ford searched

the u k for an independent company to help accelerate its race car development it first settled on lola cars and set up ford advanced vehicles later ford brought its lemans effort to the u s and the kar kraft relationship was established although kar kraft was technically an independent company it really only had one customer ford special vehicles kar kraft s story doesn t begin and end with the gt 40 that took the win away from ferrari at le mans ford expanded upon the program and organized an all out assault on racing in general cars were prepared for trans am nascar nhra and can am competition street versions of the boss 429 were assembled under its roof and fabled prototypes including the lid mustang boss 302 maverick and mach 2c were all assembled in ford s contracted race shop and then out of the blue its doors closed for good on a cold day in 1970 history tells us that ford won le mans the daytona 500 and the trans am championship but it doesn t tell us how this was accomplished author charlie henry a former kar kraft employee has enlisted the help of many of his former co workers to bring you the very first book ever published on ford s all encompassing special projects facility kar kraft p p1 margin 0 0px 0 0px 0 0px 0 0px font 12 0px arial

the influence of space power pervades almost every sphere and level of human existence from politics to military affairs to commercial activities to cultural mind sets yet there is little to be found today in the way of coherent space power doctrine and strategy particularly in national security circles to what extent do our national interests rely on space how shall we defend our interests in space and how shall we deny our adversaries the benefits of space power in time of conflict how can we control and exploit the space environment how can we effectively wield space power against the full spectrum of threats from the lone terrorist to global peer competitors what should be our long range strategy and objectives if our goal is to achieve and maintain long term space superiority the purpose of this paper is two fold first to illuminate the historical and ever increasing importance of space in modern society and second to prescribe in view of this importance the foundations of a strategy for achieving lasting space superiority and ensuring national and world security
