this collection represents a modest attempt to chart a new course for the intellectual discipline known as economic history the book is not about productivity growth in the 1990s lest the title give rise to any confusion as a group these essays suggest new and potentially fruitful areas or approaches for research and at the same time address weaknesses in past efforts one important audience will be graduate students attempting to decide whether to write a dissertation in economic history or trying to select or refine dissertation topics in the area and determine how to approach them some of the essays will most certainly be appropriate additions to the or semester courses in economic history that remain a fixture in quarter graduate economics training programs a second audience should be established scholars who are now or have in the past done research in economic history and are interested in the perspectives of a relatively younger group of scholars the term younger is used here advisedly to describe a group of scholars born between 1943 and 1954 nevertheless the authors of these essays can on at least one dimension be distinguished from the pathbreaking new economic historians who established their academic reputations in the early 1960s indeed the contributors to this volume include students of such pioneers as richard easterlin albert fishlow william parker and jeffrey williamson

most of the existing research on economic history relies either solely or ultimately on calculations of material interest to explain the major events of the modern world however care must be taken not to rely too heavily on materialism with its associated confidence in perfectly rational actors that simply do not exist what is needed for a more cogent understanding of the long history of capitalist growth is a more realistic human centered approach that can take account of the role of nonmaterial values and beliefs an approach convincingly articulated by deirdre mccloskey in her landmark trilogy of books on the moral and ethical basis of modern economic life with humanism challenges materialism in economics and economic history roderick floud santhi hejeebu and david mitch have brought together a distinguished group of scholars in economics economic history political science philosophy gender studies and communications who synthesize and build on mccloskey s work the essays in this volume illustrate the ways in which the humanistic approach to economics that mccloskey pioneered can open up new vistas for the study of economic history and cultivate rich synergies with a wide range of disciplines the contributors show how values and beliefs become embedded in the language of economics and shape economic outcomes chapters on methodology are accompanied by case studies discussing particular episodes in economic history

in this volume charles kindleberger makes a powerful case against the idea that any one model could be used to unlock the basic secret of economic history it is essentially an exercise in methodology addressed to economists and economic historians alike he argues that too many economists discover a relationship or a uniformity in economic behaviour develop a model and use it to explain more than it is capable of including on occasion all economic behaviour these lectures discuss four laws in economics to show how uniformities can illuminate economic history in particular aspects they illustrate the view that the economist or economic historian seeking to test analysis against historical data should have a variety of different models and not just one the implication is that however scientific and technical the tools choosing them carefully to fit particular circumstances is itself an art

east germany s economic history is typically told as a story of the unravelling of an inherently flawed system yet while the system s inefficiency is undeniable its economic history was much richer than its comparatively poor economic performance suggests for many who lived there it was a system that over its forty years was capable of achievements and generally functioned at bearable levels this book combines the insights of behavioural economics with archival research to peel away layers of rhetoric and assumptions about the east german economy and explore aspects of that underlying functionality through a series of cases studies that examine the establishment of socialist workplaces the searches for productivity growth and efficiency and the emergence of financial crisis the book considers the system from the perspective of the humans who operated it and made the decisions that made it work unencumbered by political preconceptions it offers a more realistic understanding of east german economic history than that derived from stagnant debates about the clash of systems the new perspectives and approaches presented demonstrate that extracted from its cold war context east germany s economic history can be analysed for what it was rather than for what it symbolised
