prescriptive bayesian decision making has reached a high level of maturity and is well supported algorithmically however experimental data shows that real decision makers choose such bayes optimal decisions surprisingly infrequently often making decisions that are badly sub optimal so prevalent is such imperfect decision making that it should be accepted as an inherent feature of real decision makers living within interacting societies to date such societies have been investigated from an economic and gametheoretic perspective and even to a degree from a physics perspective however little research has been done from the perspective of computer science and associated disciplines like machine learning information theory and neuroscience this book is a major contribution to such research some of the particular topics addressed include how should we formalise rational decision making of a single imperfect decision maker does the answer change for a system of imperfect decision makers can we extend existing prescriptive theories for perfect decision makers to make them useful for imperfect ones how can we exploit the relation of these problems to the control under varying and uncertain resources constraints as well as to the problem of the computational decision making what can we learn from natural engineered and social systems to help us address these issues

nils brunsson is one of the leading european organization theorists who has written and researched decision making in organizations he has often questioned the rationality of decision making and argued that it is as important to understand other consequences of decision making apart from choice such things as mobilizing action allocating responsibility and legitimizing organizations these consequences of decisions can influence decision making and the assumptions about feasible norms that provide their context decisions often run counter to actions and are part of what brunsson calls organizational hypocrisy decisions can substitute for action or decrease the probability of the action they call for the norm of rationality is far from obvious sometimes decision makers can recommend systematic irrationality this book collects together a wide range of nils brunsson s most important writing on decision making brought together in one volume for the first time with an introduction from the author

deciding by roger estall and grant purdy this book is intended to help decision makers of all types make even better decisions the central thesis is that whether deciders realise it or not all decisions are made using what the authors describe as the universal method of decision making the adequacy of each decision therefore depends on how skilfully the method is applied whether deciders achieve sufficient certainty about the outcomes that will flow from the decision and the contribution made by those outcomes to the organisation s purpose the authors shun jargon the eight chapters and five appendices of the book include many practical tips with examples and anecdotes from various sectors that explain the universal method issues such as context assumptions and detecting and responding to change after the decision is made are addressed and there are clear simple diagrams including an easy to follow illustration of the universal method to help the reader grasp the main concepts the authors say that deciding is a book for thinkers rather than for those seeking a formulaic or procedurally rigid methodology they will have realised their goal they say if deciding causes readers to reflect on the way they apply the universal method reinforce what they already do well and recognise opportunities to improve the authors roger estall and grant purdy who first met in 2003 have similar yet separate 40 year careers as both deciders and advisers they have each chaired and served on boards and held executive and technical management roles in multiple areas of the public private and not for profit sectors now based in sydney and melbourne respectively their careers have taken them to many parts of the world
