in the present volume for the first time a connected history of the chauhans from their beginnings in bhrjukachchha in eight century a d to the time of ala ud din khalji and hammira in the fourteenth century has been presented the author has shown that the agnikula myth goes back to the ramayana and is in fact traditional to aryan hindus he also establishes conclusively that contrary to the common belief that india fell an easy prey to muslim invaders and the resistance of the hindu rulers broke down after the defeat of prthviraja the descendants of the chauhan emperor even after they lost ajmer continued to fight with determination for two hundred years considerable new light is also thrown on the relations between the chaulukya empire and the chauhans of sakambhari especially during the reigns of siddharaja and kumarapala a valuable portion of the book is devoted to the social and economic condition of the chauhan territory during the eleventh twelfth and thirteenth centuries the enumeration and identification of the towns and villages in the country collected from the literature of the time is

especially important the names of the coins in use the weights and measures will also be found very useful

masters theses in the pure and applied sciences was first conceived published and disseminated by the center for information and numerical data analysis and synthesis cindas at purdue university in 1957 starting its coverage of theses with the academic year 1955 beginning with volume 13 the printing and dissemination phases of the activity were transferred to university microfilms xerox of ann arbor michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community after five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination hence starting with volume 18 masters theses in the pure and applied sciences has been disseminated on a worldwide basis by plenum publishing corporation of new york and in the same year the coverage was broadened to include canadian

universities all back issues can also be ordered from plenum we have reported in volume 38 thesis year 1993 a total of 13 787 thesis titles from 22 canadian and 164 united states universities we are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work while volume 38 reports theses submitted in 1993 on occasion certain universities do report theses submitted in previous years but not reported at the time

pharmaceutical biotechnology is a unique compilation of reviews addressing frontiers in biologicals as a rich source for innovative medicines this book fulfills the needs of a broad community of scientists interested in biologicals from diverse perspectives basic research biotechnology protein engineering protein delivery medicines pharmaceuticals and vaccinology the diverse topics range from advanced biotechnologies aimed to introduce novel potent engineered vaccines of unprecedented efficacy and safety for a wide scope of human diseases to natural products small peptides and polypeptides engineered for discrete prophylaxis and therapeutic purposes modern biologicals promise to dramatically expand the scope of preventive medicine beyond the infectious disease arena into broad applications in immune and

cancer treatment as exemplified by anti egfr receptors antibodies for the treatment of breast cancer the exponential growth in biologicals such as engineered proteins and vaccines has been boosted by unprecedented scientific breakthroughs made in the past decades culminating in an in depth fundamental understanding of the scientific underpinnings of immune mechanisms together with knowledge of protein and peptide scaffolds that can be deliberately manipulated this has in turn led to new strategies and processes deciphering the human mammalian and numerous pathogens genomes provides opportunities that never before have been available identification of discrete antigens genomes and antigenomes that lend themselves to considerably improved antigens and monoclonal antibodies which with more sophisticated engineered adjuvants and agonists of pattern recognition receptors present in immune cells deliver unprecedented safety and efficacy technological development such a nanobiotechnologies dendrimers nanobodies and fullerenes biological particles viral like particles and bacterial ghosts and innovative vectors replication competent attenuated replication incompetent recombinant and defective helper dependent vectors fulfill a broad range of cutting edge research drug discovery and delivery applications most recent examples of breakthrough biologicals include the human papilloma virus vaccine hpv prevention of women genital cancer and the multivalent pneumococcal vaccines which has virtually eradicated in some populations a most prevalent bacterial ear infection i e otitis media it is expected that in the years to come similar success will be obtained in the development of vaccines for diseases which still represent major threats for human health such as aids as well as for the generation of improved vaccines against diseases like pandemic flu for which vaccines are currently available furthermore advances in

comparative immunology and innate immunity revealed opportunities for innovative strategies for ever smaller biologicals and vaccines derived from species such as llama and sharks which carry tremendous potential for innovative biologicals already in development stages in many pharmaceutical companies such recent discoveries and knowledge exploitations hold the promise for breakthrough biologicals with the coming decade finally this book caters to individuals not directly engaged in the pharmaceutical drug discovery process via a chapter outlining discovery preclinical development clinical development and translational medicine issues that are critical the drug development process the authors and editors hope that this compilation of reviews will help readers rapidly and completely update knowledge and understanding of the frontiers in pharmaceutical biotechnologies
