this book poses the question do we need a new body of regulations and the constitution of new regulatory agents to face the evolution of money in the fourth industrial revolution after the global financial crisis and the subsequent introduction of distributed ledger technologies in monetary matters multiple opinions claim that we are in the middle of a financial revolution that will eliminate the need for central banks and other financial institutions to form bonds of trust on our behalf in contrast to these arguments this book argues that we are not witnessing a revolutionary expression but an evolutionary one that we can trace back to the very origin of money accordingly the book provides academics regulators and policy makers with a multidisciplinary analysis that includes elements such as the relevance of intellectual property rights which are disregarded in the legal analysis of money furthermore the book proposes the idea that traditional analyses on the exercise of the *lex monetae* ignore the role of inside monies and technological infrastructures developed and supported by the private sector as exemplified in the evolution of the cryptoassets market and in cases such as *banco de portugal v waterlow sons* the book puts forward a proposal for the design and regulation of new payment systems and invites the reader to look beyond the dissemination of individual distributed ledger technologies such as bitcoin

in the past foreign shocks arrived to national economies mainly through trade channels and transmissions of such shocks took time to come into effect however after capital globalization shocks spread to markets almost immediately despite the increasing macroeconomic dangers that the situation generated at emerging markets in the south nobody at the north was ready to acknowledge the pro cyclicity of the financial system and the inner weakness of decontrolled financial innovations because they were enjoying from the great moderation monetary policy was primarily centered on price stability objectives without considering the mounting credit and asset price booms being generated by market liquidity and the problems generated by this glut mainstream economists in turn were not majorly attracted in integrating financial factors in their models external pressures on emerging market economies emes were not eliminated after 2008 but even increased as international capital flows augmented in relevance thereafter initially economic authorities accurately responded to the challenge but unconventional monetary policies in the us began to create important spillovers in emes furthermore in contrast to a previous surge in liquidity funds were now transmitted to emes throughout the bond market the perspective of an increase in us interest rates by the fed is generating a reversal of expectations and a sudden flight to quality emerging countries currencies began to experience higher volatility levels and depreciation movements against a newly strong us dollar are also increasingly observed consequently there are increasing doubts that the unexpected favorable outcome observed in most emes at the aftermath of the global financial crisis gfc would remain

small jurisdictions have become significant players in cross border corporate and financial services their nature legal status and market roles however remain under theorized lacking a sufficiently nuanced framework to describe their functions in cross border finance and the peculiar strengths of those achieving global dominance in the marketplace it remains impossible to evaluate their impacts in a comprehensive

manner this book advances a new conceptual framework to refine the analysis and direct it toward more productive inquiries bruner canvasses extant theoretical frameworks used to describe and evaluate the roles of small jurisdictions in cross border finance he then proposes a new concept that better captures the characteristics competitive strategies and market roles of those achieving global dominance in the marketplace the market dominant small jurisdiction mdsj bruner identifies the central features giving rise to such jurisdictions competitive strengths some reflect historical cultural and geographic circumstances while others reflect development strategies pursued in light of those circumstances through this lens he evaluates a range of small jurisdictions that have achieved global dominance in specialized areas of cross border finance including bermuda dubai singapore hong kong switzerland and delaware bruner further tests the mdsj concept s explanatory power through a broader comparative analysis and he concludes that the mdsjs significance will likely continue to grow as will the need for a more effective means of theorizing their roles in cross border finance and the global dynamics generated by their ascendance

this monograph offers a comprehensive analysis of the implementation of global anti money laundering and counter terrorism financing aml ctf regulations in the united states and the european union it provides academics legal professionals and interested readers with a deep understanding of the developments of the aml ctf legal framework and guides them into the dimension of its most difficult relation with international and european human rights law the implementation of global anti money laundering regulations in the united stated and the european union has essentially led to the suspension of laws governing privacy and bank secrecy banks and other financial institutions now operate as an extension of law enforcement the current anti money laundering regime jeopardises the fundamental achievements of the constitutional state the increasing centralisation and cooperation of the competent authorities in the exchange of personal data information creates a security architecture that leads to a considerable risk of freedom restriction in particular the extension of the authorities power of intervention granting them access to citizens personal data without the need for initial suspicion underlines that a substantial part of

the constitutional state is at risk furthermore banks appear to use these policies as an instrument to clear legitimate but less profitable customers in particular those with a migration background consequently the implementation of the aml ctf legal framework appears to follow a discriminatory path and clearly discloses incompatibility features with respect to the european convention on human rights and article 21 of the charter of fundamental human rights of the european union this monograph further explores factors contributing to the inefficiency of aml ctf regulatory and legislative measures such factors are identified in inconsistent rules which make the cooperation among national investigative authorities within the eu and at an international level more challenging as a result this work acknowledges regulatory and legislative harmonisation with respect to aml ctf regimes as a central tool to successfully improve the effectiveness of aml ctf regimes while preserving the individual right to privacy due process and civil rights
