over the past decade knowledge assets and intellectual capital have been attracting an increasing amount of attention not only from academics and ceos but also from national policy makers to date most studies of intellectual capital have focused at the organizational level with an emphasis on explaining the role of intangible assets as a differentiator between accounting value and market value as a possible source of corporate competitive advantage more recently pioneers in the field including the authors of this book have begun to apply these methodologies to a broader scope with the objective of comparing the intellectual capital indices at the national or regional level as a result an increasing number of world organizations and researchers are commissioned to investigate this future oriented crucial national issue yet the linkage between the value of intangible assets and how to quantify or benchmark it is still tenuous not to mention easily misunderstood by a layman for guiding better decision making with the belief that numbers talk and statistics hide valuable information this book serves to present the authors research findings covering 14 years 1995 2008 of intellectual capital information comprised of human capital market capital process capital renewal capital and financial capital for 40 countries the last three chapters go beyond analysis of current intellectual capital factors and present practical tools for launching initiatives at the national level the book will serve as an essential resource for researchers policy makers and business leaders concerned with issues of economic growth and competitiveness innovation and business creation

borderline personality disorder bpd has been widely viewed as a chronic disorder which has led many clinicians to avoid treating patients with this diagnosis bpd is also one of the most stigmatized of psychiatric disorders due to the awkward manner in which these individuals attempt to get their needs met as such those with bpd are increasingly marginalized by society and prevented from accessing quality care in the fullness of time debunks the common myth that bpd is incurable drawing on the findings of the nimh funded study the mclean study of adult development which has found that bpd has the best symptomatic outcome of all major psychiatric illnesses

citing and analyzing the results of this landmark decades long study mary zanarini explains why there is reason for optimism when it comes to bpd remissions lasting two to eight years are common and stable furthermore remission of all 24 symptoms of the disorder are also quite typical equally promisingly the acute and most life threatening symptoms of bpd such as self harm and suicide attempts remit rapidly and recur less frequently than do temperamental symptoms zanarini also reports on more sobering findings concerning high levels of poor outcomes relating to vocational impairment and physical health reported by the 40 of patients who have not recovered which have significant impact on wellbeing and use of medical and other services considered together the findings generated by this important research provide much needed hope for those diagnosed with bpd particularly in guiding future research on and treatment for borderline personality disorder
