the power of colleagues what happens when primary care clinicians meet together on set aside time in their practice settings to talk about their own patients complimenting quality metrics or performance measures through discussing the actual stories of individual patients and their clinician patient relationships in these settings how can clinicians pool their collective experience and apply that to the evidence for an individual patient especially for patients who do not fit the standard protocols and have vague and worrisome symptoms poor response to treatment unpredictable disease courses and or compromised abilities for shared decision making what follows when discussion about individual patients reveals system wide service gaps and coordination limitations particularly for patients with complex clinical problems that fall outside performance monitors and quality screens how can collaborative engagement of case based uncertainties with one's colleagues help combat the loneliness and helplessness that pcps can experience no matter what model or setting in which they practice and where they are expected to practice coordinated evidence based emr directed care these questions inspired lucia sommers and john launer and their international contributors to explore the power of colleagues in clinical uncertainty in primary care the challenge of collaborative engagement and offer antidotes to sub optimal care that can result when clinicians go it alone from the foreword lucia sommers and john launer with the accompanying input of their contributing authors have done a deeply insightful and close to exhaustive job of defining clinical uncertainty they identify its origins components and subtypes demonstrate the ways in which and the extent to which it is intrinsic to medicine and they present a cogent case for its special relationship to primary care practice clinical uncertainty in primary care not only presents a model of collegial collaboration and support it also implicitly legitimates it renee fox annenberg professor emerita of the social sciences university of pennsylvania

## **Collaborative Problem Solving**

2019-06-06

as people are living longer on average than ever before the number of those with dementia will increase because many will live a considerable time at home with their diagnosis we need to know more about the ways people can adapt to and learn to live with dementia in their everyday lives lars christer hydén argues in this book that to do so will involve re imagining what dementia really is and what it can mean to the afflicted and their loved ones one of the most important everyday opportunities for sharing experiences is the simple act of storytelling but when someone close to you gradually loses the ability to tell stories and cherish the shared history you have together this is seen as a threat to the relationship to the feeling of belonging together and to the identity of the person diagnosed therefore learning about how people with dementia can participate in storytelling along with their families and friends helps to sustain those relationships and identities in entangled narratives hydén not only emphasizes the possibilities that are inherent in collaborative storytelling but instructs professionals and otherwise healthy relatives to learn how to effectively listen and ultimately re imagine their patients and loved ones as collaborative meaning makers in their lives
