he is the all time master of the american mystery novel john saul many people look upon a microscope as a mere instrument to them microscopy is instrumentation other people consider a microscope to be simply an aid to the eye to them microscopy is primarily an expansion of macroscopy in actuality microscopy is both objective and subjective it is seeing through an instrument by means of the eye and more importantly the brain the function of the brain is to interpret the eye's image in terms of the object's structure thought and experience are required to distinguish structure from artifact it is said that galileo 1564-1642 had his associates first look through his telescope microscope at very familiar objects to convince them that the image was a true representation of the object then he would have them proceed to hitherto unknown worlds too far or too small to be seen with the unaided eye since galileo's time light microscopes have been improved so much that performance is now very close to theoretical limits electron microscopes have been developed in the last four decades to exhibit thousands of times the resolving power of the light microscope through the news media everyone is made aware of the marvelous microscopical accomplishments in imagery however little or no hint is given as to what parts of the image are derived from the specimen itself and what parts are from the instrumentation to say nothing of the changes made during preparation of the specimen over the past 25 years the field of neutron diffraction for residual stress characterization has grown tremendously and has matured from the stage of trial demonstrations to provide a practical tool with widespread applications in materials science and engineering while the literature on the subject has grown commensurately it has also remained the travis mcgee series by john d macdonald bestselling author and the inspiration behind a generation of crime writers is one for fans of lee child
