an authorised reissue of the long out of print classic textbook advanced

calculus by the late dr lynn loomis and dr shlomo sternberg both of harvard university has been a revered but hard to find textbook for the advanced calculus course for decades this book is based on an honors course in advanced calculus that the authors gave in the 1960 s the foundational material presented in the unstarred sections of chapters 1 through 11 was normally covered but different applications of this basic material were stressed from year to year and the book therefore contains more material than was covered in any one year it can accordingly be used with omissions as a text for a year s course in advanced calculus or as a text for a three semester introduction to analysis the prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view together with some acquaintance with linear algebra the reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication as possible introductory texts we mention differential and integral calculus by r courant calculus by t apostol calculus by m spivak and pure mathematics by g hardy the reader should also have some experience with partial derivatives in overall plan the book divides roughly into a first half which develops the calculus principally the differential calculus in the setting of normed vector spaces and a second half which deals with the calculus of differentiable manifolds

paper recycling in an increasingly environmentally conscious world is gaining importance increased recycling activities are being driven by robust overseas markets as well as domestic demand recycled fibers play a very important role today in the global paper industry as a substitute for virgin pulps paper recovery rates continue to increase year after year recycling technologies have been improved in recent years by advances in pulping flotation deinking and cleaning screening resulting in the quality of paper made from secondary fibres approaching that of virgin paper the process is a lot more eco friendly than the virgin papermaking process using less energy and natural resources produce less solid waste and fewer atmospheric emissions and helps to preserve natural resources and landfill space currently more than half of the paper is produced from recovered papers most of them are used to produce brown grades paper and board but for the last two decades there is a substantial increase in the use of recovered papers to produce through deinking white grades such as newsprint tissue market pulp by using recycled paper companies can take a significant step toward reducing their overall environmental impacts this study deals with the scientific

and technical advances in recycling and deinking including new developments covers in great depth all the aspects of recycling technologies covers the latest science and technology in recycling provides up to date authoritative information and cites many mills experiences and pertinent research includes the use of biotech methods for deinking refining and improving drainage

macroeconomic policy is one of the most important policy domains and the tools of macroeconomics are among the most valuable for policy makers yet there has been up to now a wide gulf between the level at which macroeconomics is taught at the undergraduate level and the level at which it is practiced at the same time doctoral level textbooks are usually not targeted at a policy audience making advanced macroeconomics less accessible to current and aspiring practitioners this book born out of the masters course the authors taught for many years at the harvard kennedy school fills this gap it introduces the tools of dynamic optimization in the context of economic growth and then applies them to a wide range of policy questions ranging from pensions consumption investment and finance to the most recent developments in fiscal and monetary policy it does so with the requisite rigor but also with a light touch and an unyielding focus on their application to policy making as befits the authors own practical experience advanced macroeconomics an easy guide is bound to become a great resource for graduate and advanced undergraduate students and practitioners alike

acclaimed as a modern dramatic masterpiece rosencrantz guildenstern are dead is the fabulously inventive tale of hamlet as told from the worm s eve view of the bewildered rosencrantz and guildenstern two minor characters in shakespeare s play in tom stoppard s best known work this shakespearean laurel and hardy finally get a chance to take the lead role but do so in a world where echoes of waiting for godot resound where reality and illusion intermix and where fate leads our two heroes to a tragic but inevitable end tom stoppard was catapulted into the front ranks of modem playwrights overnight when rosencrantz and guildenstern are dead opened in london in 1967 its subsequent run in new york brought it the same enthusiastic acclaim and the play has since been performed numerous times in the major theatrical centers of the

world it has won top honors for play and playwright in a poll of london
theater critics and in its printed form it was chosen one of the notable
books of 1967 by the american library association

## *The Institute of Actuaries Year Book*

1959

an introduction to a broad range of topics in deep learning covering
mathematical and conceptual background deep learning techniques used in
industry and research perspectives written by three experts in the field
deep learning is the only comprehensive book on the subject elon musk
cochair of openai cofounder and ceo of tesla and spacex deep learning is
a form of machine learning that enables computers to learn from
experience and understand the world in terms of a hierarchy of concepts
because the computer gathers knowledge from experience there is no need
for a human computer operator to formally specify all the knowledge that
the computer needs the hierarchy of concepts allows the computer to
learn complicated concepts by building them out of simpler ones a graph
of these hierarchies would be many layers deep this book introduces a
broad range of topics in deep learning the text offers mathematical and
conceptual background covering relevant concepts in linear algebra
probability theory and information theory numerical computation and
machine learning it describes deep learning techniques used by
practitioners in industry including deep feedforward networks
regularization optimization algorithms convolutional networks sequence
modeling and practical methodology and it surveys such applications as
natural language processing speech recognition computer vision online
recommendation systems bioinformatics and videogames finally the book
offers research perspectives covering such theoretical topics as linear
factor models autoencoders representation learning structured
probabilistic models monte carlo methods the partition function
approximate inference and deep generative models deep learning can be
used by undergraduate or graduate students planning careers in either
industry or research and by software engineers who want to begin using
deep learning in their products or platforms a website offers
supplementary material for both readers and instructors
