until recently the world has been preoccupied with over population pressure on resources alarming growth rates fertility and unemployment issues like reduction in population growth rate increasing longevity the greying population reducing fertility rates and overall depopulation have not been considered seriously depopulation has led to redistribution further the world economy forces women to choose between career and child covid 19 has further aggravated the situation it appears that population processes are smooth with no major upheavals but if we delve deeper we will find undercurrents happening concurrently which contribute towards population composition these undercurrents have been swift and cannot be captured by decadal censuses hence one has to depend on alternative sources surprisingly the electronic media has become quite sensitive to population issues in this book an attempt has been made to understand these issues differently
