Great by Choice 2011-10-13

the new question ten years after the worldwide bestseller good to great jim collins returns with another groundbreaking work this time to ask why do some companies thrive in uncertainty even chaos and others do not based on nine years of research buttressed by rigorous analysis and infused with engaging stories collins and his colleague morten hansen enumerate the principles for building a truly great enterprise in unpredictable tumultuous and fast moving times the new study great by choice distinguishes itself from collins s prior work by its focus not just on performance but also on the type of unstable environments faced by leaders today with a team of more than twenty researchers collins and hansen studied companies that rose to greatness beating their industry indexes by a minimum of ten times over fifteen years in environments characterized by big forces and rapid shifts that leaders could not predict or control the research team then contrasted these 10x companies to a carefully selected set of comparison companies that failed to achieve greatness in similarly extreme environments the new findings the study results were full of provocative surprises such as the best leaders were not more risk taking more visionary and more creative than the comparisons they were more disciplined more empirical and more paranoid innovation by itself turns out not to be the trump card in a chaotic and uncertain world more important is the ability to scale

innovation to blend creativity with discipline following the belief that leading in a fast world always requires fast decisions and fast action is a good way to get killed the great companies changed less in reaction to a radically changing world than the comparison companies the authors challenge conventional wisdom with thought provoking sticky and supremely practical concepts they include 10xers the 20 mile march fire bullets then cannonballs leading above the death line zoom out then zoom in and the smac recipe finally in the last chapter collins and hansen present their most provocative and original analysis defining quantifying and studying the role of luck the great companies and the leaders who built them were not luckier than the comparisons but they did get a higher return on luck this book is classic collins contrarian data driven and uplifting he and hansen show convincingly that even in a chaotic and uncertain world greatness happens by choice not by chance

Artificial Intelligence 2018-09-04

recent startling successes in machine intelligence using a technique called deep learning seem to blur the line between human and machine as never before are computers on the cusp of becoming so intelligent that they will render humans obsolete harry collins argues we are getting

ahead of ourselves caught up in images of a fantastical future dreamt up in fictional portrayals the greater present danger is that we lose sight of the very real limitations of artificial intelligence and readily enslave ourselves to stupid computers the surrender by dissecting the intricacies of language use and meaning collins shows how far we have to go before we cannot distinguish between the social understanding of humans and computers when the stakes are so high we need to set the bar higher to rethink intelligence and recognize its inherent social basis only if machine learning succeeds on this count can we congratulate ourselves on having produced artificial intelligence

Ageing of Infrastructure 2018-09-21

the book addresses the problem of ageing infrastructure and how ageing can reduce the service life below expected levels the rate of ageing is affected by the type of construction material environmental exposure function of the infrastructure and loading each of these factors is considered in the assessment of ageing how do international design codes address ageing predictive models of ageing behaviour are available and the different types empirical deterministic and probabilistic are discussed in a whole of life context life cycle plans initiated at the design stage can ensure that the design life is met while optimising the management of the asset reducing life cycle costs and reducing the environmental footprint due to less maintenance remediation interventions and fewer unplanned stoppages and delays health monitoring of infrastructure can be conducted via implanted probes wired or wireless or by non destructive testing that can routinely measure the durability loading and exposure environments at key locations around the facility routine monitoring can trigger preventative maintenance that can extend the life of the infrastructure and minimise unplanned and reactive remediation while also providing ongoing data that can be utilised towards more durable future construction future infrastructure will need to be safe and durable financially and environmentally sustainable over the lifecycle thereby raising socio economic wellbeing the book concludes by discussing the key impacting factors that will need to be addressed the author brings a strong academic and industry background to present a resource for academics and practitioners wishing to address the ageing

4th Applied Synthetic Biology in Europe **2020-06-29**

two of the uk s leading economists call for an end to extreme individualism as the engine of prosperity provocative but thought provoking and nuanced telegraph throughout history successful societies have created institutions which channel both competition and co operation to achieve complex goals of general benefit these institutions make the difference between societies that thrive and those paralyzed by discord the difference between prosperous and poor economies such societies are pluralist but their pluralism is disciplined successful societies are also rare and fragile we could not have built modernity without the exceptional competitive and co operative instincts of humans but in recent decades the balance between these instincts has become dangerously skewed mutuality has been undermined by an extreme individualism which has weakened co operation and polarized our politics collier and kay show how a reaffirmation of the values of mutuality could refresh and restore politics business and the environments in which people live politics could reverse the moves to extremism and tribalism

businesses could replace the greed that has degraded corporate culture the communities and decaying places that are home to many could overcome despondency and again be prosperous and purposeful as the world emerges from an unprecedented crisis we have the chance to examine society afresh and build a politics beyond individualism
