An Universal Dictionary of the Marine. Falconer Improved and Modernized. The Mariner's New and Complete Naval Dictionary ... Illustrated with Thirteen Or, Rather, Twelve Copper-plate Engravings

... Third Edition, Revised, Corrected and Improved by J. W. Norie

1830

mercury primarily because of its existence and bioaccumulation as methylmercury in aquatic organisms is a concern for the health of higher trophic level organisms or to their consumers this is the major factor driving current research in mercury globally and in environmental regulation and is the driver for the current unep global partnership for mercury transport and fate research unep f t initiative the overall focus of the unep f t report is to assess the relative importance of different processes mechanisms affecting the transfer of mercury hg from emission sources to aquatic and terrestrial receptors and provide possible source receptor relationships this transfer occurs through atmospheric transport chemical transformations and subsequent deposition and involves the intermittent recycling between reservoirs that occurs prior to ultimate removal of hg from the atmosphere understanding the sources the global hg transport and fate and the impact of human activity on the biosphere requires improved knowledge of hg movement and transformation in the atmosphere an improved understanding of hg emission sources fate and transport is important if there is to be a focused and concerted effort to set priorities and goals for hg emission management and reduction at the national regional and global levels and to develop and implement such policies and strategies to achieve this a series of coordinated scientific endeavors focused on the estimation of sources measurement and validation of concentrations and processes and modeling coupled with interpretation of the results within a policy framework is likely to be required
