Chemical News and Journal of Industrial Science 1877 vols for 1898 1968 include a directory of publishers

Journal of the Society of Chemical Industry 1947 cracking jee main advanced requires skills to solve a variety of thought provoking problems with requisite synthesis of many concepts and may additionally require tricky mathematical manipulations a massive collection of the most challenging problems the selected problems series comprises of 3 books one each for physics chemistry and mathematics to suit the practice needs of students appearing for upcoming jee main and advanced exam ranjeet shahi's 1500 selected problems asked in chemistry aims to sharpen your problem solving skills according to the exam syllabi across 30 logically sequenced chapters working through these chapters you will be able to make precise inferences while avoiding the pitfalls in applying various laws of chemistry the step by step solutions to the problems in the book train you in both the general and specific problem solving strategies essential for all those appearing in jee main advanced and all other engineering entrance examinations or anyone who is interested to problem solving in chemistry

OCR Chemistry 2010-10 atmospheric chemistry is one of the fastest growing fields in the earth sciences until now however there has been no book designed to help students capture the essence of the subject in a brief course of study daniel jacob a leading researcher and teacher in the field addresses that problem by presenting the first textbook on atmospheric chemistry for a one semester course based on the approach he developed in his class at harvard jacob introduces students in clear and concise chapters to the fundamentals as well as the latest ideas and

findings in the field jacob s aim is to show students how to use basic principles of physics and chemistry to describe a complex system such as the atmosphere he also seeks to give students an overview of the current state of research and the work that led to this point jacob begins with atmospheric structure design of simple models atmospheric transport and the continuity equation and continues with geochemical cycles the greenhouse effect aerosols stratospheric ozone the oxidizing power of the atmosphere smog and acid rain each chapter concludes with a problem set based on recent scientific literature this is a novel approach to problem set writing and one that successfully introduces students to the prevailing issues this is a major contribution to a growing area of study and will be welcomed enthusiastically by students and teachers alike
