this illuminating investigation uncovers the full dimensions of the student loan disaster a father and son team one a best selling sociologist the other a former banker and current quantitative researcher probes how we ve reached the point at which student loan debt now exceeding 1 trillion and predicted to reach 2 trillion by 2020 threatens to become the sequel to the mortgage meltdown in spite of their good intentions americans have allowed concerns about deadbeat students crushing debt exploitative for profit colleges and changing attitudes about the purpose of college education to blind them to a growing crisis with college costs climbing faster than the cost of living how can access to higher education remain a central part of the american dream with more than half of college students carrying an average debt of 27 000 at graduation what are the prospects for young adults in the current economy examining how we ve arrived at and how we might extricate ourselves from this grave social problem the student loan mess is a must read for everyone

concerned about the future of american education hard facts about the student loan crisis student loan debt is rising by more than 100 billion every year among recent college students who are supposed to be repaying their loans more than a third are delinquent because student loans cannot be discharged through bankruptcy the federal government misleadingly treats student loan debt as a government asset higher default rates spiraling college costs and proposals for more generous terms for student borrowers make it increasingly likely that student loan policies will eventually cost taxpayers hundreds of billions of dollars

this book presents a unified methodology for the design of pid controllers that encompasses the wide range of different dynamics to be

found in industrial processes this is extended to provide a coherent way of dealing with the tuning of pid controllers the particular method at the core of the book is the so called model reference robust tuning moreert developed by the authors moreert constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem the book starts by presenting the different two degree of freedom pid control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model secondly the moreert design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules in later chapters the application of moreert to over damped inverse response integrating and unstable processes is described the book ends by presenting three possible extensions of the moreert methodology thereby opening the door to new research developments in this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of

control systems who will find appropriate advanced solutions to many application problems

this groundbreaking work challenges modernist military science and explores how a more open design epistemology is becoming an attractive alternative to a military staff culture rooted in a monistic scientific paradigm the author offers fresh sociological avenues to become more institutionally reflexive to offer a variety of design frames of reference beyond those typified by modern military doctrine modernist military knowledge has been institutionalized to the point that blinds

militaries to alternative designs organizationally and in their interventions this book seeks to reconstruct strategy and operations in designing ways and develops theories of action through multifaceted contextualizations and recontextualizations of situations showing that military design does not have to rely on set rational analytic decision making schemes but on seeking alternative meanings in and on action the work offers an alternative philosophy of practice that embraces the unpredictability of tasks to be accomplished written by colonel paparone u s army ret phd with a special chapter by two active duty officers it will appeal to all in military and security studies including professionals and policymakers
