Interior, Environment, and Related Agencies Appropriations for 2011, Part 7, 111-2 Hearings 2010

astronomy is the most ancient science humans have practiced on earth
it is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of
temperatures of density and masses of magnetic fields etc it is a science which is highly visible
not only because stars and planets are accessible in the sky to the multitude but also because the
telescopes themselves are easily distinguishable usually on top of scenic mountains and also because
their cost usually represent a substantial proportion of the national
budget and of the taxpayers contribution to that budget as such astronomy cannot pass unnoticed it
touches on the origins of matter of the universe where we live on life and on our destiny it touches on
philosophy as well as on religion astronomy is the direct contact
of humankind with its origins and the immensity of universal nature it is indeed a science of observation
where experimentation is practically possible and which is ruled by mathematics physics chemistry
statistical analysis and modelling while offering the largest number of verifications of the most
advanced theories of fundamental physics such as general relativity and gravitation at the beginning
of the 21 century astronomy is clearly a multidisciplinary activity touching on all aspects of science it

a teachers guide to organizational strategies for thinking and writing wrinkles in teaching a series of guidebooks for teachers Copy
is therefore logical that in the past and still now astronomy has attracted the most famous scientists —
be they pure observers mathematicians physicists biologists experimentalists and even politicians
